Introduction

The Third-Party Technical Guidelines is a one-stop-shop document for information about third-party software application compatibility with NICE systems.

This document should be used by NICE customers and customer service organizations in order to verify the compatibility of third-party software to NICE products in addition to specific configuration information.

This document serves as general guidelines and applies to all existing NICE Engage Platform versions.

Updates for specific product versions may be issued separately based on these guidelines. NICE, at its sole discretion, may decide to change the general guidelines or deviate from them for a specific product version.

This document should apply in cases where it contradicts a previous Technical Note.

Scope of this Guide

Software Version

This guide is updated for NICE Engage Platform 7.3.

What is included in this guide?

Guidelines for third party software with NICE applications.

What is not included in this guide?

Topic	Where to Find this Topic...
NICE Screen Agent software	<i>ScreenAgent H264</i> or <i>ScreenAgent RCXP</i> .

Topic	Where to Find this Topic...
Setting up a client computer to work with ASPX	<i>Workstation Setup</i>
Configuring XBAP	<i>Workstation Setup</i>
Microsoft Daylight Savings Time configurations	<i>Maintenance</i>

Microsoft Software Service Packs Certified by NICE

This section lists the Microsoft Software Service Packs certified by NICE. These service pack versions are part of the site readiness tests in the SRT, in addition to the minimum hardware and software requirements that are in the [*Certified Servers*](#).

Product	NICE Engage Platform
Release	NICE Engage Platform 7.x
Synopsis	Provides information regarding the latest Microsoft Software Service Packs certified by NICE.

Below are two tables that list the latest Microsoft Software Service Packs certified by NICE for servers and client machines.

Windows Server and SQL Server Service Packs

Windows Client Software Service Packs

Microsoft Software	SP/Creator Update	NICE Release	Comment
Windows 10	Supported Creator Updates: Version 21H2 Version 22H2	NICE Engage Platform 7.x	
Windows 11	Supported Creator Updates: Version 23H2 Version 24H2 Version 25H2	NICE Engage Platform 7.x	

Microsoft Client Operating Systems: Windows 10 32-bit or 64-bit

NICE Engage Platform Release 7.x supports Windows 10. This section provides information on Microsoft Windows 10 Operating system, both in the 32-bit and 64-bit versions.

In addition to the operating systems that are highlighted in this section, NICE Engage Platform was also certified for Windows 7, 8/8.1, and 11.

General Information: Localization

NICE does not support machine names and/or domain names with non-ASCII characters (IRI) on Client workstations.

Windows 10 Client Applications Compatibility

From NICE Engage 7.x, Microsoft Windows 10 Pro Edition and Windows 10 Enterprise Edition are compatible with NICE client applications, in both 32-bit and 64-bit configurations.

Application	Windows 10 Pro		Windows 10 Enterprise	
	32-bit	64-bit	32-bit	64-bit

Using the Silent Installation to Install Client Applications

Use the following commands to install NICE Engage Platform client-side applications with the silent installation on workstations running Microsoft Windows 10:

- [Reporter Viewer](#)
- [NICE Player and NICE Player Codec Pack](#) on the facing page
- [Record on Demand](#) on the facing page
- [NICE BSF Toolkit](#) on the facing page

Reporter Viewer

➡ To install the Reporter Viewer Application:

1. In the command-line prompt, enter the following command:

```
ReporterViewer.exe /S /D=<ReporterViewer installation folder>
```

or

```
msiexec /i "ReporterViewer.msi" /qn
```

2. After installing the Reporter Viewer, install the SAP Business Object BI platform located in the following folder:

C:\Program Files (x86)\Nice Systems\Reporter Viewer\32bitCA\32bit

In a silent installation BI platform, enter the following command:

```
setup.exe -r response.ini /q
```

NICE Player and NICE Player Codec Pack

➔ To install the NICE Player and NICE Player Codec Pack:

- In the command-line prompt, enter the following command:

```
msiexec /i "Nice Player.msi" /qn
```

```
msiexec /i "Nice Player Codec Pack.msi" /qn
```

Record on Demand

➔ To install the Record on Demand:

- At the command-line prompt, type the following:

```
msiexec /i "RODSetup.msi" /qn SERVERURL=<nnn> LAUNCH="No" ALLUSERS=1
```

Where *nnn* is the Host Name.

NICE BSF Toolkit

➔ To install the NICE BSF Toolkit:

In the command-line prompt, enter the following command:

```
msiexec /i "NICE BSF Toolkit.msi" /qn
```

Manually Installing NICE Client Applications

NOTE: The procedures listed below are applicable to all NICE Engage Platform client-side components on workstations running Microsoft Windows 10 operating system.

In NICE Engage Platform systems, UAC can be turned on while installing client-side applications.

➔ To manually install NICE client-side applications on workstations with Microsoft Windows 10:

1. Log in to the workstation with a valid user with administrative privileges.

2. Locate the application installation directory. The default path for NICE Player, NICE Player Codec Pack, Reporter Viewer, and Record on Demand is:
`\\server_name\...\Program Files\NICE Systems\Applications\Client Side Applications`
3. Copy the required application installation file(s) to the local computer.
4. Run the installation wizard.

Microsoft Client Operating Systems: Windows 11 64-bit

NICE Engage Platform Release 7.x supports Windows 11. This section provides information on Microsoft Windows 11 Operating system 64-bit version.

In addition to the operating systems that are highlighted in this section, NICE Engage Platform was also certified for Windows 7, 8/8.1, and 10.

General Information: Localization

NICE does not support machine names and/or domain names with non-ASCII characters (IRI) on Client workstations.

Windows 11 Client Applications Compatibility

From NICE Engage 7.x, Microsoft Windows 11 Pro Edition and Windows 11 Enterprise Edition are compatible with NICE client applications.

Important! Before using Windows 11 Pro or Enterprise Editions with supported browsers, configure the required browser. See [Enabling IE Mode for Microsoft Edge](#) on page 43 or [Adding the IE Tab to Google Chrome](#) on page 60.

Application	Windows 11 Pro 64-bit	Windows 11 Enterprise 64-bit
ScreenAgent	Approved	Approved
IntelliAgent (ConnectAPI)	Approved	Approved
Record on Demand/Stop on Demand	Approved	Approved

Application	Windows 11 Pro 64-bit	Windows 11 Enterprise 64-bit
Standalone NICE Player and NICE Player Codec Pack	Approved	Approved
Reporter Viewer	Approved	Approved
BSF Tool Kit	Approved	Approved
NICE Sentinel Remote Client	Approved	Approved
NDM/SRT/RHT	Approved	Approved
High Availability Manager	Approved	Approved
NICE Web Applications	Approved	Approved

Using the Silent Installation to Install Client Applications

Use the following commands to install NICE Engage Platform client-side applications with the silent installation on workstations running Microsoft Windows 11:

- [Reporter Viewer](#)
- [NICE Player and NICE Player Codec Pack](#) on the facing page
- [Record on Demand](#) on the facing page
- [NICE BSF Toolkit](#) on the facing page

Reporter Viewer

➡ To install the Reporter Viewer Application:

1. In the command-line prompt, enter the following command:

```
ReporterViewer.exe /S /D=<ReporterViewer installation folder>
```

or

```
msiexec /i "ReporterViewer.msi" /qn
```

2. After installing the Reporter Viewer, install the SAP Business Object BI platform located in the following folder:

C:\Program Files (x86)\Nice Systems\Reporter Viewer\32bitCA\32bit

In a silent installation BI platform, enter the following command:

```
setup.exe -r response.ini /q
```

NICE Player and NICE Player Codec Pack

➔ To install the NICE Player and NICE Player Codec Pack:

- In the command-line prompt, enter the following command:

```
msiexec /i "Nice Player.msi" /qn
```

```
msiexec /i "Nice Player Codec Pack.msi" /qn
```

Record on Demand

➔ To install the Record on Demand:

- At the command-line prompt, type the following:

```
msiexec /i "RODSetup.msi" /qn SERVERURL=<nnn> LAUNCH="No" ALLUSERS=1
```

Where *nnn* is the Host Name.

NICE BSF Toolkit

➔ To install the NICE BSF Toolkit:

In the command-line prompt, enter the following command:

```
msiexec /i "NICE BSF Toolkit.msi" /qn
```

Manually Installing NICE Client Applications

NOTE: The procedures listed below are applicable to all NICE Engage Platform client-side components on workstations running Microsoft Windows 11 operating system.

In NICE Engage Platform systems, UAC can be turned on while installing client-side applications.

➔ To manually install NICE client-side applications on workstations with Microsoft Windows 11:

1. Log in to the workstation with a valid user with administrative privileges.

2. Locate the application installation directory. The default path for NICE Player, NICE Player Codec Pack, Reporter Viewer, and Record on Demand is:
`\\server_name\...\Program Files\NICE Systems\Applications\Client Side Applications`
3. Copy the required application installation file(s) to the local computer.
4. Run the installation wizard.

Microsoft Client Operating Systems: Windows 8 and Windows 8.1 32-bit or 64-bit

This section provides information regarding Microsoft Client Operating Systems. This includes secure solutions, updates, and guidelines.

In addition to the operating systems that are highlighted in this section, NICE Engage Platform was also certified for Windows 7, 10, and 11.

General Information: Localization

NICE does not support machine names and/or domain names with non-ASCII characters (IRI) on Client workstations.

Client Applications Compatibility

NICE Engage Platform 7.x supports the following editions of Microsoft Windows 8 and Microsoft Windows 8.1, in both 32-bit and 64-bit configurations:

- Microsoft Windows 8 Pro Edition
- Microsoft Windows 8 Enterprise Edition
- Microsoft Windows 8.1 Pro Edition
- Microsoft Windows 8.1 Enterprise Edition

The following table shows the compatibility of NICE Engage Platform 7.x client applications with Microsoft Windows 8/8.1:

Application	Windows 8 32-bit	Windows 8 64-bit	Windows 8.1 32-bit	Windows 8.1 64-bit
ScreenAgent	Approved	Approved	Approved	Approved

Application	Windows 8 32-bit	Windows 8 64-bit	Windows 8.1 32-bit	Windows 8.1 64-bit
ROD	Approved	Approved	Approved	Approved
Standalone NICE Player and NICE Player Codec Pack	Approved	Approved	Approved	Approved
Reporter Viewer	Approved	Approved	Approved	Approved
NICE Applications (including Set Security)	Approved	Approved	Approved	Approved
Survey Manager	Not Supported	Approved	Not Supported	Not Supported
VRA	Approved	Approved	Approved	Approved
BSF Tool Kit	Approved	Approved	Approved	Approved
NICE Sentinel Remote Client	Not Supported	Approved	Not Supported	Approved

Using the Silent Installation to Install Client Applications

Use the following commands to install NICE Engage Platform client-side applications with the silent installation on workstations running Microsoft Windows 8 and Windows 8.1:

- [NICE Player and NICE Player Codec Pack](#) below
- [NICE ScreenAgent](#) on the facing page
- [Record on Demand](#) on page 30

NICE Player and NICE Player Codec Pack

This topic describes how to install the NICE Player and NICE Player Codec Pack.

➡ To use NICE Player and NICE Player Codec Pack:

- At the command-line prompt, type:

```
msiexec /i "Nice Player.msi" /qn
```

```
msiexec /i "Nice Player Codec Pack.msi" /qn
```

NICE ScreenAgent

This section describes how to install NICE ScreenAgent by using the silent installation. Use one of the following methods:

- Run the silent installation locally on each client machine on which you want to install NICE ScreenAgent.
- Use a publishing application to deploy NICE ScreenAgent on all the client machines.

➔ To install NICE ScreenAgent using a silent installation:

1. Copy the NICE ScreenAgent installation folder to a temporary location on the server where you want to run the silent installation.

2. Extract the .msi files by running the following command in the Run window:

```
<Path\Setup.exe file> /t:<Path\target folder> /c
```

where <Path\Setup.exe file> is the path to the Setup file in the NICE ScreenAgent installation folder and <Path\target folder> is the path to the folder with the .msi files to be extracted.

This command extracts two .msi files to the target folder:

- screenagentxp.msi - (32-bit installation)
- screenagentxp64.msi - (64-bit installation)

3. To install the NICE ScreenAgent software, run *one* of the following procedures:

- For local manual installation, in the Run window on each client machine, type the following command:

```
msiexec.exe /i <full path to .msi file> /q SYSADMIN = <Application Server Host Name>
```

NOTE:

You must leave a space (not an underscore) after <path to Setup.exe file> and after <target folder>.

You must leave a space (not an underscore) after msiexec, after /i, after <full path to .msi file>, and after q.

Or

- For a batch installation, configure the publishing application to run the relevant .msi file.

NOTE: You can use any publishing application that supports .msi files. After completing the installation, configure the NICE ScreenAgent in the System Administrator.

Record on Demand

This topic describes how to install the Record on Demand application.

➔ To use Record on Demand:

- At the command-line prompt, type the following:

```
msiexec /i "RODSetup.msi" /qn SERVERURL=<nnnn> LAUNCH="No" ALLUSERS=1
```

Where *nnnn* is the Host Name.

Manually Installing NICE Client Applications

NOTE: The procedures listed below are applicable to all NICE Engage Platform client-side components on workstations running Microsoft Windows 8/8.1 operating systems.

In NICE Engage Platform systems, UAC can be turned on while installing client-side applications.

➔ To manually install NICE client-side applications on workstations with Microsoft Windows 8 or Microsoft Windows 8.1:

1. Log in to the workstation with a valid user with administrative privileges.
2. Locate the application installation directory. The default path for NICE Player, NICE Player Codec Pack, Reporter Viewer, and Record on Demand is:

```
\\server_name\...\Program Files\NICE Systems\Applications\Client Side Applications
```

3. Copy the required application installation file(s) to the local computer.
4. Run the installation wizard.

Microsoft Client Operating Systems: Windows 7 32-bit or 64-bit

This section provides information regarding Microsoft Client Operating Systems. This includes secure solutions, updates, and guidelines.

In addition to the operating systems that are highlighted in this section, NICE Engage Platform was also certified for Windows 8/8.1, 10, and 11.

General Information: Localization

NICE does not support machine names and/or domain names with non-ASCII characters (IRI) on Client workstations.

Client Application Compatibility

NICE Systems supports the following editions of Microsoft Windows 7 in both 32-bit and 64-bit configurations:

- Microsoft Windows 7 Professional Edition
- Microsoft Windows 7 Enterprise Edition
- Microsoft Windows 7 Ultimate Edition

The following table shows the compatibility of NICE Engage Platform client applications with Microsoft Windows 7:

Important!

- NICE Applications and the Set Security feature support only the 32-bit version of Internet Explorer.
- (*) These components must be installed with the UAC turned **OFF**.

Application	NICE Engage 7.x	
	Windows 7 32-bit	Windows 7 64-bit
Screen Agent	Approved	Approved
ROD Client	Approved	Approved
Standalone NICE Player and NICE Player Codec Pack	Approved	Approved
Reporter Viewer	Approved	Approved
NICE Applications (including Set Security)	Approved	Approved
Survey Manager	Approved	Approved
VRA	Approved	Approved
BSF Tool kit	Approved	Approved
NICE Sentinel Remote Client	Approved	Approved
APA	Approved	Approved

Using Silent Installation to Install Client Applications

NOTE: The commands listed below are applicable to both Microsoft Windows 7 32-bit and 64-bit operating systems.

Use the following commands to install NICE Engage Platform client-side applications using the silent installation on workstations running Microsoft Windows 7 (usually from a central deployment server, such as SMS/SCCM 2007, etc.):

- [Set Security Application](#) on the facing page.
- [NICE Player and NICE Player Codec Pack](#) on the facing page.
- [Reporter Viewer](#) on the facing page.
- [NICE ScreenAgent](#) on the facing page.

- [Record on Demand](#) on the next page.
- [Nice BSF Toolkit](#) on the next page

Set Security Application

Enter in the Command line:

```
SetSecurityApp.exe Server <nnnn>
```

NICE Player and NICE Player Codec Pack

Enter in the Command line:

```
msiexec /i "Nice Player.msi" /qn
```

```
msiexec /i "Nice Player Codec Pack.msi" /qn
```

Reporter Viewer

For NICE Engage Platform Release 7.x

Enter in the command line:

```
ReporterViewer.exe /S /D=<ReporterViewer installation folder>
```

or

```
msiexec /i "ReporterViewer.msi" /qn
```

NICE ScreenAgent

For NICE Engage Platform 7.x

➔ To install NICE ScreenAgent using a silent installation:

1. Copy the NICE ScreenAgent installation folder to a temporary location on the server on which you want to run the silent installation.
2. Extract the .msi files by running the following command in the Run window:

```
<Path\Setup.exe file> /t:<Path\target folder> /c
```

Here <Path\Setup.exe file> is the path to the Setup file in the NICE ScreenAgent installation folder and <Path\target folder> is the path to the folder to which you want to extract the .msi files.

Important! You must leave a space (not an underscore) after <path to Setup.exe file> and after <target folder> .

This command extracts two .msi files to the target folder:

- screenagentxp.msi - (32-bit installation)
- screenagentxp64.msi - (64-bit installation)

3. To install the NICE ScreenAgent software, run one of the following procedures (for details about configuring the parameters see *Configuring NICE ScreenAgent Installation Parameters*, in *ScreenAgent H264* or *ScreenAgent RCXP*.):

- If you are running the silent installation locally on each client machine, in the Run window, run the following command:
msiexec.exe /i <full path to .msi file> /q SYSADMIN = <Application Server Host Name>

Important! You must leave a space (not an underscore) after msiexec, after /i, after <full path to .msi file>, and after q.

-or-

- If you are deploying NICE ScreenAgent using a publishing application, configure the publishing application to run the relevant .msi file.

NOTE: You can use any publishing application that supports .msi files.

After completing the installation, you configure the NICE ScreenAgent in the System Administrator.

Record on Demand

Enter in the Command line:

```
msiexec /i "RODSetup.msi" /qn SERVERURL=<nnnn> LAUNCH="No" ALLUSERS=1
```

in which "nnnn" is the Host Name

Nice BSF Toolkit

For NICE Engage Platform, in the Command line, enter the following:

```
msiexec /i "NICE BSF Toolkit.msi" /qn
```

Manually Installing Client Applications

NOTE: The procedures listed below are applicable to NICE Engage Platform 7.x client-side components on workstations running Microsoft Windows 7 32-bit or 64-bit operating systems.

Keep in mind that in NICE Engage Platform 7.x, UAC can be turned on during the installation of the client-side applications.

➔ To install client-side applications on workstations with Microsoft Windows 7:

1. Locate the application installation directory.

The default path for NICE Player, NICE Player Codec Pack, Reporter Viewer, and Record on Demand is:

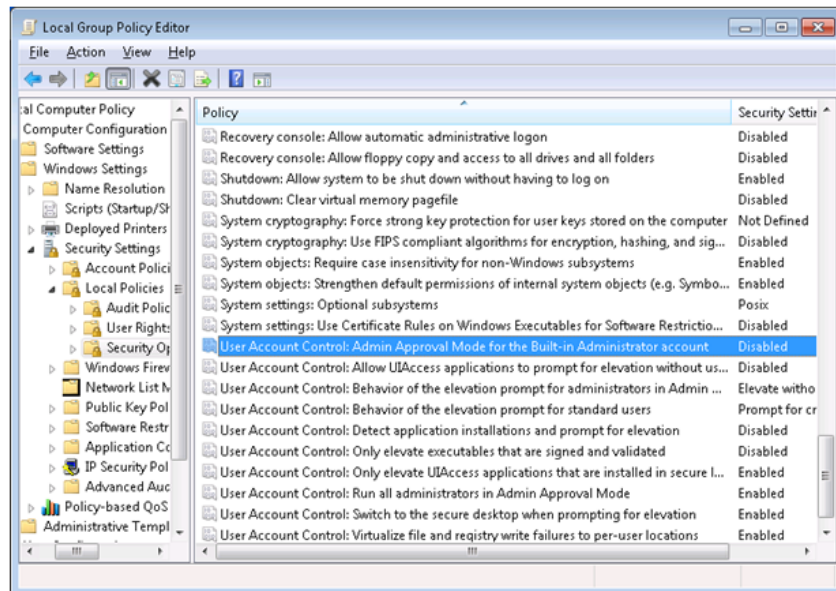

\\server_name\...\Program Files\NICE Systems\Applications\Client Side Applications

2. Copy the required application installation file(s) to the local computer.
3. Log in to the workstation using a User with Administrative privileges.
4. Refer to [Microsoft Client Operating Systems: Windows 7 32-bit or 64-bit](#) on page 31 to see if the component requires that the UAC be turned Off. If the UAC can remain on, run the installation wizard.

If the UAC must be turned off, do one of the following:

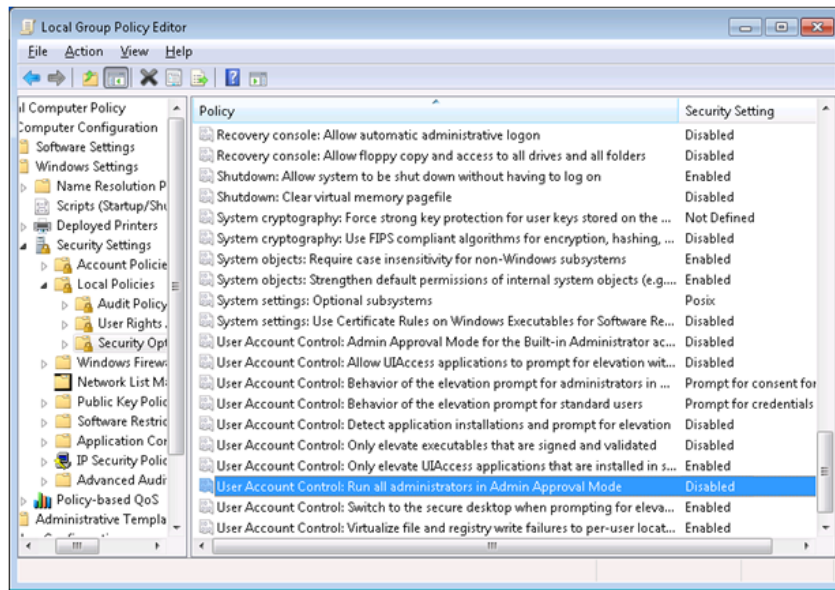

- If you logged in under the Built-in Administrator, in the Local Group Policy Editor window, set the User Account Control: Admin Approval Mode for the Built-in Administrator policy to Disabled.

View image

- If you logged in under another user with Administrative privileges, in the Local Group Policy Editor window, set the User Account Control: Run all administrators in Admin Approval Mode policy to Disabled.

View image

5. Run the installation wizard.

Internet Explorer 11

 **Important!** Microsoft [announced](#) that Internet Explorer 11 (IE11) desktop application retired on June 15, 2022. For more information, see [Internet Explorer 11 desktop app retirement FAQ](#). NICE Engage Platform is fully compatible with Microsoft Edge and Google Chrome browsers.

➔ To continue working in your NICE environment, follow one of these options:

- Use the Microsoft Edge browser in IE mode. This is the official Microsoft alternative to IE11. Microsoft have stated that they are committed to supporting this solution until at least 2029.

For more details, see [The future of Internet Explorer on Windows 10 is in Microsoft Edge](#).

To configure Microsoft Edge with IE Mode for Engage, see [Microsoft Edge with IE Mode](#) on page 41.

- Use the Google Chrome browser with IE Tab. IE Tab is a certified extension to Chrome from Blackfish Software that fully supports IE11.

For more details, see [IE Tab - Run Internet Explorer Inside Chrome](#).

To configure Google Chrome with the IE Tab Extension for Engage, see [Google Chrome with the IE Tab Extension](#) on page 57.

Compatibility of NICE Web Applications with Internet Explorer 11 32, 64-bit

This section describes compatibility of Internet Explorer 11 with NICE Web Applications.

Product	NICE Engage Platform, NICE Sentinel, NICE Advanced Process Automations
---------	--

Release	<p>NICE Sentinel:</p> <ul style="list-style-type: none"> ■ NICE Sentinel Remote Client: 7.x. <p>NOTE: Internet Explorer works with Sentinel Remote Client only when using compatibility mode (Compatibility mode is the Microsoft Internet Explorer default mode). For more information, see the <i>NICE Sentinel Installation and Configuration</i> installation and configuration guide.</p> <p>NICE Advanced Process Automation</p>
Synopsis	<p>Windows 10 Pro 32/64-bit</p> <p>Windows 10 Enterprise 32/64-bit</p> <p>Windows 8.1 Pro 32/64-bit</p> <p>Windows 8.1 Enterprise 32/64-bit</p> <p>Windows 7 Professional SP1 32/64-bit</p> <p>Windows 7 Enterprise SP1 32/64-bit</p> <p>Windows 7 Ultimate SP1 32/64-bit</p> <p>Windows Server 2016 Datacenter 64-bit</p> <p>Windows Server 2016 Standard 64-bit</p> <p>Windows Server 2019 Datacenter 64-bit</p> <p>Windows Server 2019 Standard 64-bit</p>

Prerequisite Updates for Internet Explorer 11

During the installation of Internet Explorer 11 for Windows 7 SP1, prerequisite components are installed as well. If the prerequisite components cannot be installed, the installation stops. In this case, install the following prerequisite updates manually:

- KB2729094
- KB2731771
- KB2533623
- KB2670838
- KB2786081
- KB2834140

General Description and Conclusions

General tests were performed using Internet Explorer 11 (IE11) with NICE Engage Platform 7.x.

Conclusions

The NICE Engage Platform is compatible with all tested operating systems with the following limitations:

- Run only one NICE Engage Platform Applications Suite per browser.
- Use XBAP with the Windows 8.1 and Windows 7 client systems only.
- For Internet Explorer 11 on Windows 10, Windows 8.1 and Windows 7, you must have NICE Engage Platform 7.x.

See [NICE Web Applications Known Issues with Internet Explorer 11](#) below

NICE Web Applications Known Issues with Internet Explorer 11

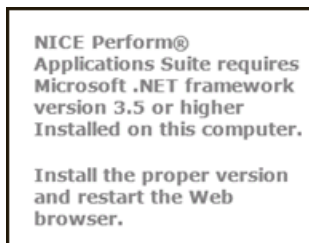

Important! NICE Applications and the Set Security feature support only the 32-bit version of Internet Explorer.

The following section describes known issues when using Internet Explorer 11:

When the NICE Application Server is identified as an **Internet** site, the following message may appear:

NICE Applications Suite requires Microsoft.NET framework version 3.5 or higher Installed on this computer. Install the proper version and restart the Web browser.

[View image](#)

Configuring Internet Explorer 11 to Disable Protected Mode

Perform the following procedure to configure Internet Explorer 11 to disable *Protected Mode*.

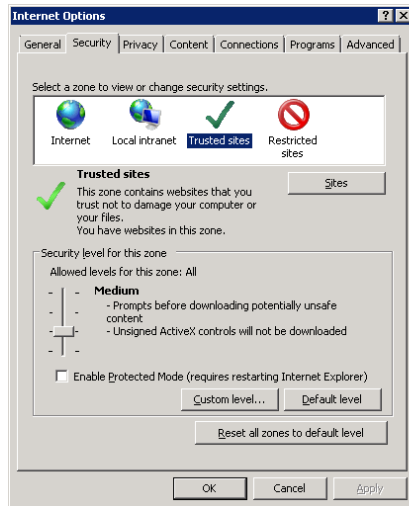

➔ To disable *Protected Mode*:

1. Run Internet Explorer 11. Right-click the Internet Explorer icon, and select Run as Admin.

2. On the Menu Bar, select Tools, and then Internet Options.

The Internet Options windows appears:

View image

3. Click the Security tab. In the Security level for this zone area, make sure that Enable Protected Mode is not selected.
4. Click OK.

Microsoft Edge with IE Mode

This section describes compatibility of the Microsoft Edge browser in IE Mode with NICE Web Applications.

Compatibility of NICE Web Applications with Microsoft Edge in IE Mode

Policy Manager	Approved
Fraudster Exposure	Approved

Enabling IE Mode for Microsoft Edge

This section describes how to use Edge in IE Mode to access NICE Web Applications. This is necessary because Edge does not support ActiveX controls, Browser Helper Objects, VBScript, or other legacy technology. To access the NICE Web Applications that use this technology, you can configure Edge to automatically load these sites in IE Mode.

Before you configure Edge with IE Mode, make sure that all your workstations have the latest version of Edge.

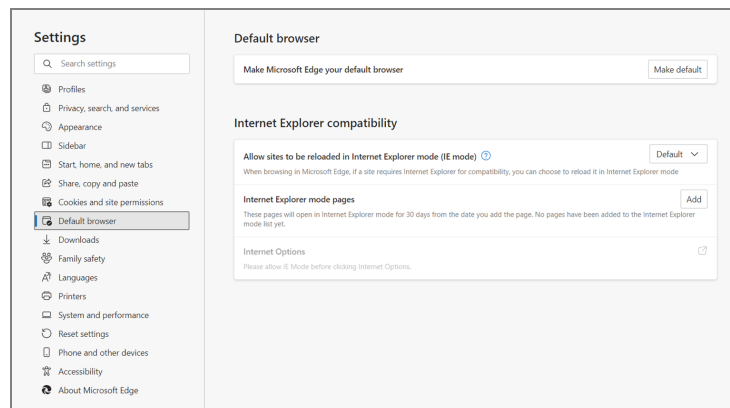

To enable IE Mode in Edge, perform *one* of the following procedures:

- a. [Configuring IE Mode in Microsoft Edge Simplified Procedure](#) below
- b. [Configuring IE Mode in Microsoft Edge over Domain Controller GPO](#) on page 47

Configuring IE Mode in Microsoft Edge Simplified Procedure

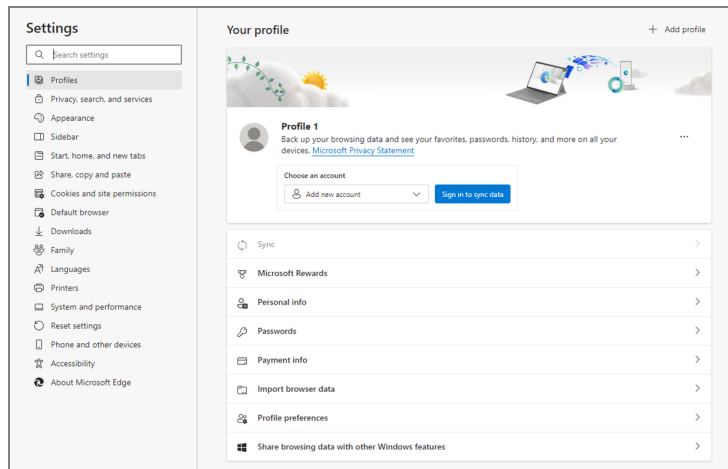

1. Open Microsoft Edge.
2. Do one of the following:
 - a. In the address bar, enter `edge://settings/defaultbrowser`.

The Settings window appears with Default browser selected.

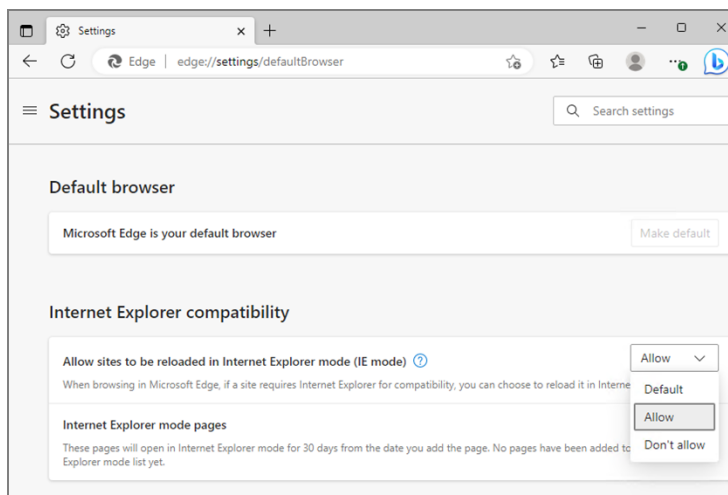

- b. Click the ellipsis menu button and select **Settings**.

The Settings window appears.

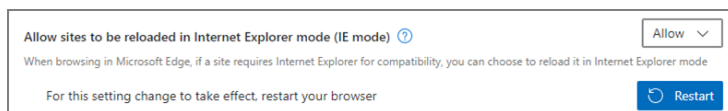

In the Settings window, select Default browser.

- From the Allow sites to be reloaded in Internet Explorer mode (IE mode) dropdown menu, select Allow.

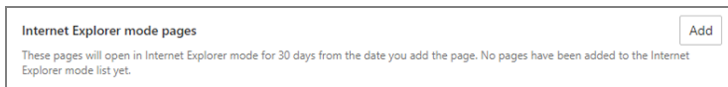

- To apply the settings changes, click Restart in the Allow sites to be reloaded in Internet Explorer mode (IE mode) area.

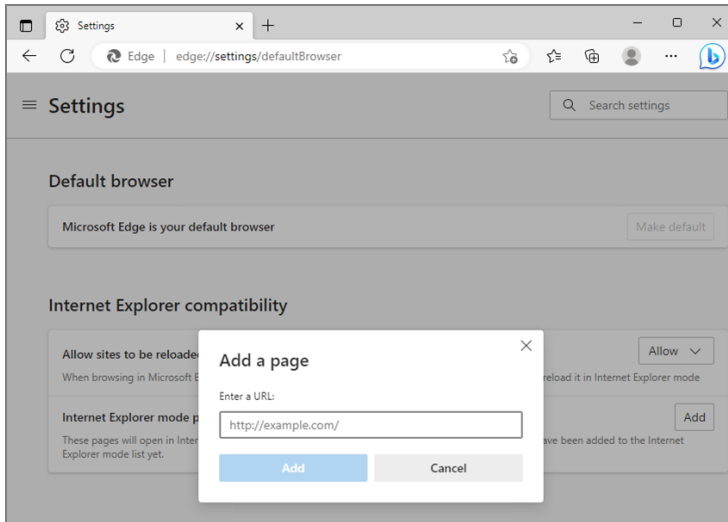

The browser restarts.

- In the Internet Explorer mode pages area, click Add to add the NICE Engage URL.

The Add a page window appears.

6. In the URL field, enter the NICE Engage URL and click Add.

 **Important!** The NICE Engage URL must have the following format: `https://<Engage_FQDN>/Nice`. Remember that the URL is case sensitive.

If the following NICE Engage components are used, enter the NICE Engage URLs below:

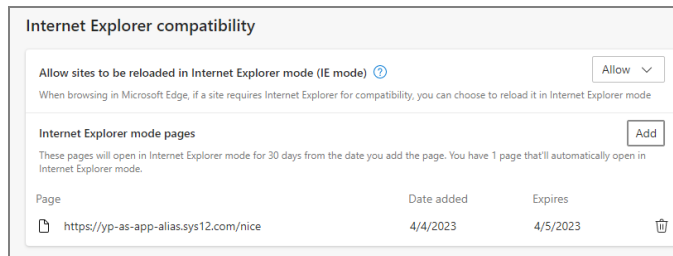

NICE Engage Components	NICE Engage URL
Policy Manager	<code>https://yp-as-app-alias.sys12.com:63343/PolicyManager/index.html</code>
Compliance Assurance	<code>https://yp-as-app-alias.sys12.com:63343/compliance-assurance/index.html</code>
Fraudster Exposure	<code>https://yp-as-app-alias.sys12.com:63343/fraudster-exposure/index.html</code>
Insight Amplifier	<code>https://bs-aa-app-acg.sys12.com:63343/ccih-insight-amplifier-application/index.html</code>

 Show Tip

Port 63343 is used with secure communication (https), and port 63342 is used without secure communication (http).

The added URL appears in the Internet Explorer mode pages area.

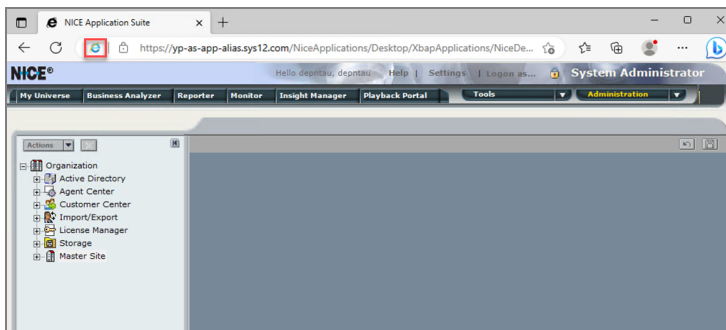

View image

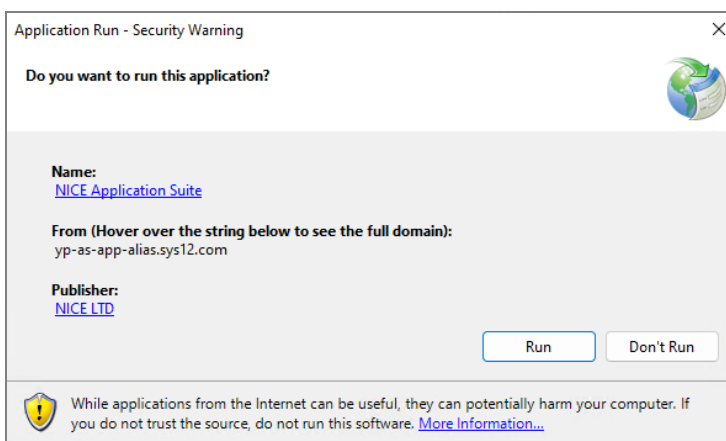

7. Verify that the NICE Engage URL is added to the Trusted sites, see *Adding NICE Engage URL to the Trusted sites* in the *Workstation Setup* guide.

8. Open Microsoft Edge and log in to Engage.

If the IE Mode configuration is working, the Internet Explorer icon will appear on the left side of the navigation bar.

The Application Run - Security Warning window appears.

In the Application Run - Security Warning window, click Run, and log in to Engage.

 **Important!** Using multiple browser types at the same time, on the same workstation, is not supported in Engage 7.x. For example, Microsoft Edge and Google Chrome cannot both be open and in use on the same workstation, at the same time.

Configuring IE Mode in Microsoft Edge over Domain Controller GPO

This procedure is optional and can be performed for configuring IE mode in Edge on all workstations placed in domain without the 30 day limitation from Microsoft.

You can use group policy objects to configure policy settings for Microsoft Edge. To configure Edge with group policy objects, you have to install administrative templates. Depending on your Platform, download the Microsoft Edge policy templates file from [Download and configure Microsoft Edge for Business](#).

The policy template files add rules and settings for Microsoft Edge to the group policy in the domain controller for your domain or to the Policy Definition template folder on your individual computer, as described in:

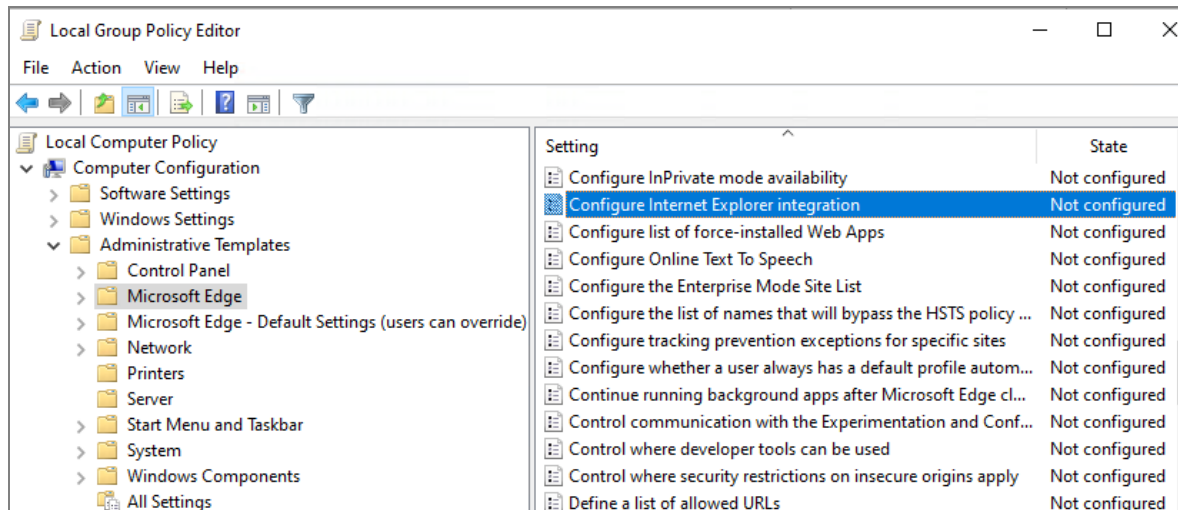

- [To Add the Administrative Template to the Domain Controller](#): below
- [To Add the Administrative Template to an Individual Computer](#): on the next page

➡ **To Add the Administrative Template to the Domain Controller:**

1. On a domain controller or workstation with RSAT, browse to the PolicyDefinition folder (also known as the Central Store) on any domain controller for your domain.
For older versions of Windows Server, you may need to create the PolicyDefinition folder. For more information, see [How to create and manage the Central Store for Group Policy Administrative Templates in Windows](#).
2. Open MicrosoftEdgePolicyTemplates, and go to windows > admx.
3. Copy the msedge.admx file to the PolicyDefinition folder. (Example: %systemroot%\sysvol\domain\policies\PolicyDefinitions)
4. In the admx folder, open the appropriate language folder. For example, if you're in the U.S., open the en-US folder.
5. Copy the msedge.adml file to the matching language folder in the Policy Definition folder. Create the folder if it does not already exist. (Example: %systemroot%\sysvol\domain\policies\PolicyDefinitions\EN-US)

6. If your domain has more than one domain controller, the new ADMX files will be replicated to them at the next domain replication interval.
7. To confirm the files loaded correctly, open the Local Group Policy Editor from Windows Administrative Tools and expand Computer Configuration > Administrative Templates > Microsoft Edge. You should see one or more Microsoft Edge nodes as shown below.

View image

8. Continue with [Configuring the Internet Explorer Integration Policy](#) on the facing page.

➡ To Add the Administrative Template to an Individual Computer:

1. On the target computer, open MicrosoftEdgePolicyTemplates, and go to windows > admx.
2. Copy the msedge.admx file to your Policy Definition template folder. (Example: C:\Windows\PolicyDefinitions)
3. In the admx folder, open the appropriate language folder. For example, if you're in the U.S., open the en-US folder.
4. Copy the msedge.adml file to the matching language folder in your Policy Definition folder. (Example: C:\Windows\PolicyDefinitions\en-US)
5. To confirm the files loaded correctly either open Local Group Policy Editor directly (Windows key + R and enter gpedit.msc) or open MMC and load the Local Group Policy Editor snap-in. If an error occurs, it's usually because the files are in an incorrect location.
6. Continue with [Configuring the Internet Explorer Integration Policy](#) on the facing page.

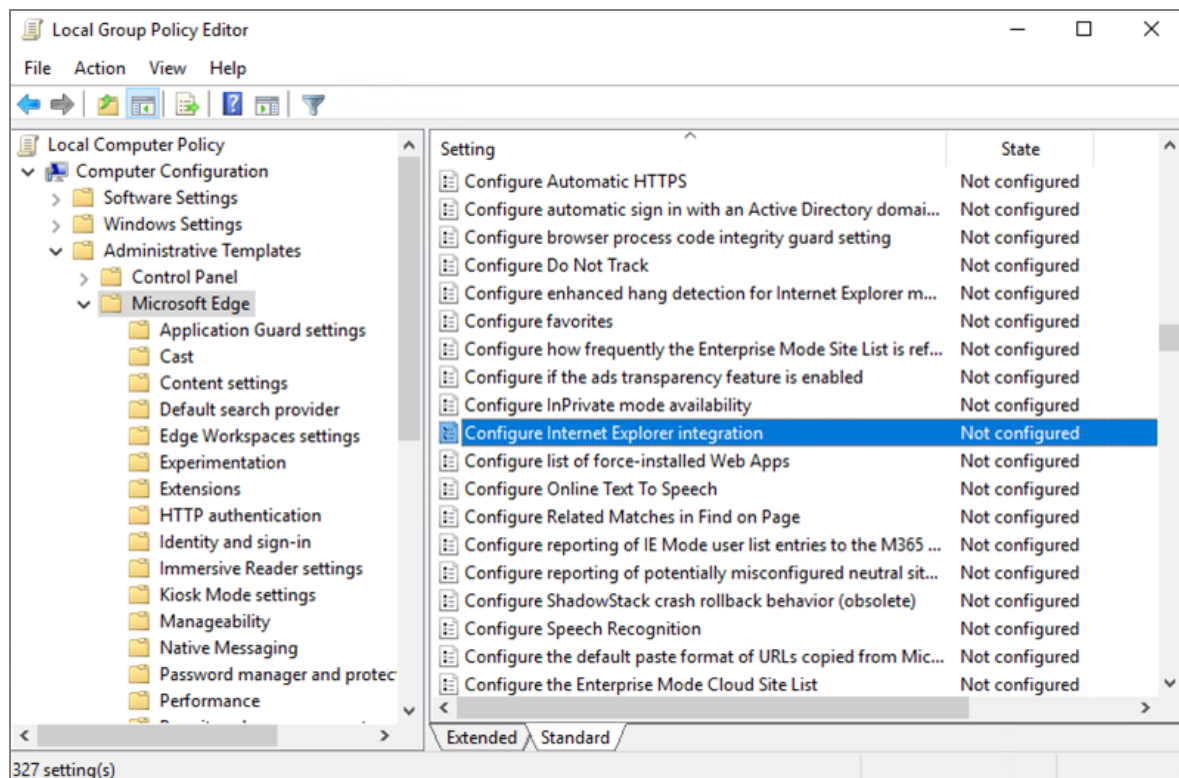

Configuring the Internet Explorer Integration Policy

To enable IE Mode in Edge you need to configure the Internet Explorer integration settings in the group policy.

➔ To configure the Internet Explorer integration policy:

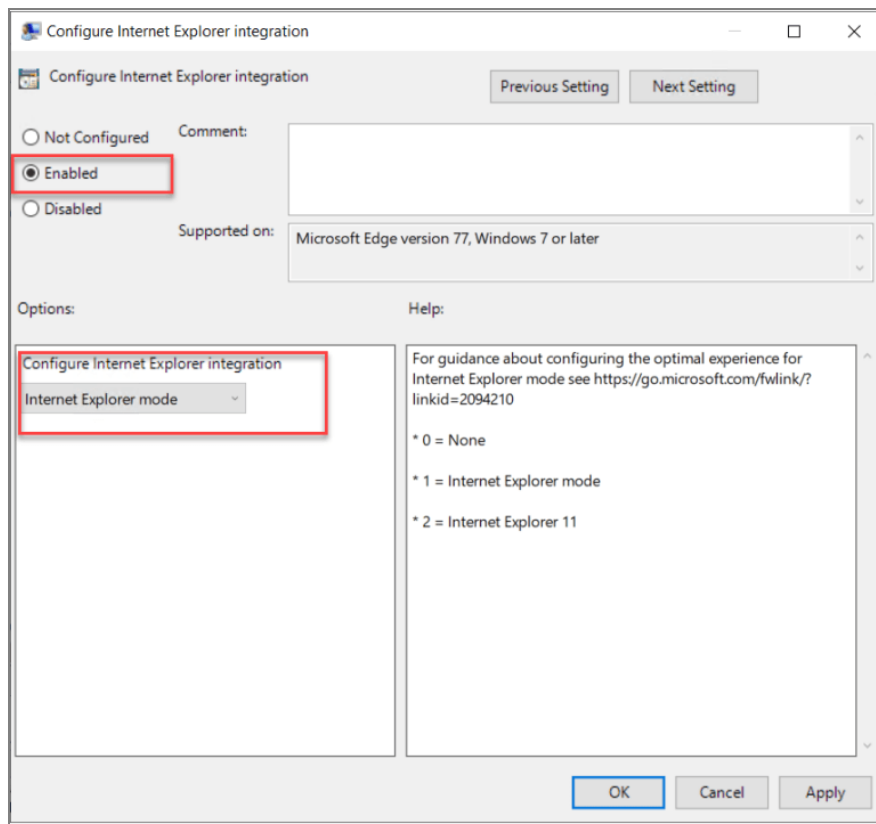

1. In the Group Policy Management Editor, browse to Policies > Administrative Templates Policy definitions > Microsoft Edge.

View image

2. Click Configure Internet Explorer integration. The Configure Internet Explorer integration window appears.

View image

3. Select the Enabled radio button, then, in the Options area select Internet Explorer mode from the dropdown menu.
4. Click Apply, then click OK to close the Configure Internet Explorer integration window.
5. Continue with [Configuring the Enterprise Mode Site List](#) below.

Configuring the Enterprise Mode Site List

To enable IE Mode in Edge, configure the Enterprise Mode Site List policy settings in the group policy. The Enterprise Mode Site List Manager helps create and manage XML files for IE Mode. An XML file can also be created manually.

This procedure will allow to use a web page without the 30 day limitation from Microsoft.

➡ To configure the Enterprise Mode Site List:

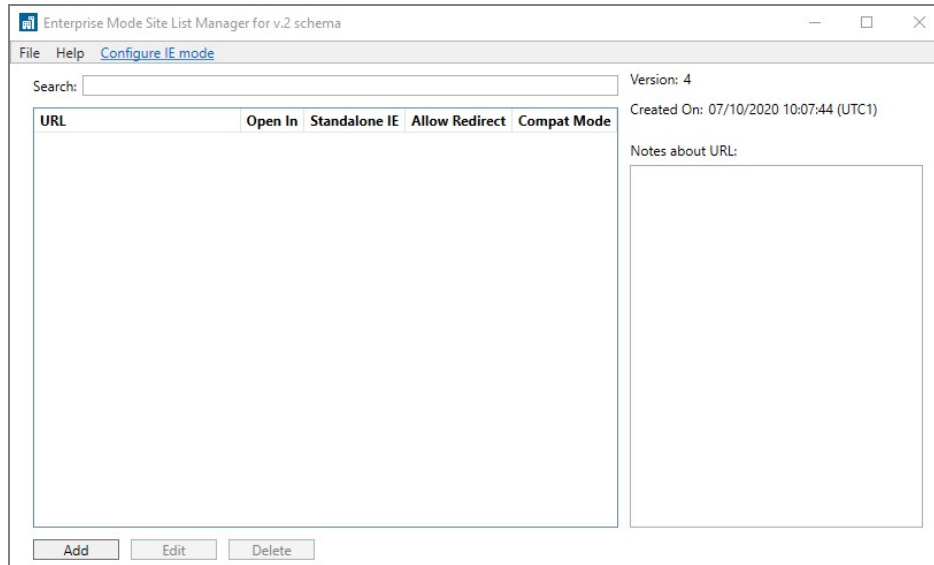

1. Download and install the Enterprise Mode Site List Manager (schema v.2):
<https://www.microsoft.com/en-us/download/details.aspx?id=49974>.

2. Open the Enterprise Mode Site List Manager application

The Enterprise Mode Site List Manager for v.2 schema window appears.

[View image](#)

3. Click Add. The Add new website window appears.

[View image](#)

4. Enter the following information:
 - a. In the URL field, enter your Engage FQDN without http or https. The Enterprise Mode Site List Manager tool automatically attempts to run both versions during the validation of the URL. If you are in an AD FS environment, you need to add the FQDN of the Federation Service name.
 - b. From the Open In dropdown menu, select IE11.
 - c. Ensure the Standalone IE check box and the Allow Redirect check box are unchecked.
 - d. Click Save. The Enterprise Mode Site List Manager window appears with the list of sites you selected to open in IE Mode.

View image

URL	Open In	Standalone IE	Allow Redirect	Compat Mode
bs-aa-app-acg.sys12.com	IE11	False	False	IE11

5. Select File, then select Save to XML.
6. Copy the xml file to the Application server in the folder C:\inetpub\wwwroot.

View image

PC > Local Disk (C:) > inetpub > wwwroot >

Name	Date modified	Type	Size
aspnet_client	12/27/2019 4:34 PM	File folder	
Temp	10/27/2020 6:03 PM	File folder	
iisstart.htm	12/27/2019 3:30 PM	HTML Document	1 KB
iisstart.png	12/27/2019 3:30 PM	PNG File	98 KB
List.xml	10/27/2020 5:59 PM	XML Document	1 KB

Example:

```
<site-list version="1">
<created-by>
<tool>EMIESiteListManager</tool>
<version>12.0.0.0</version>
<date-created>05/16/2023 13:05:20</date-created>
</created-by>
<site url="yp-as-app-alias.sys12.com">
<compat-mode>Default</compat-mode>
<open-in>IE11</open-in>
</site>
</site-list>
```

7. Continue with [Configuring the Enterprise Mode Site List Policy](#) below.

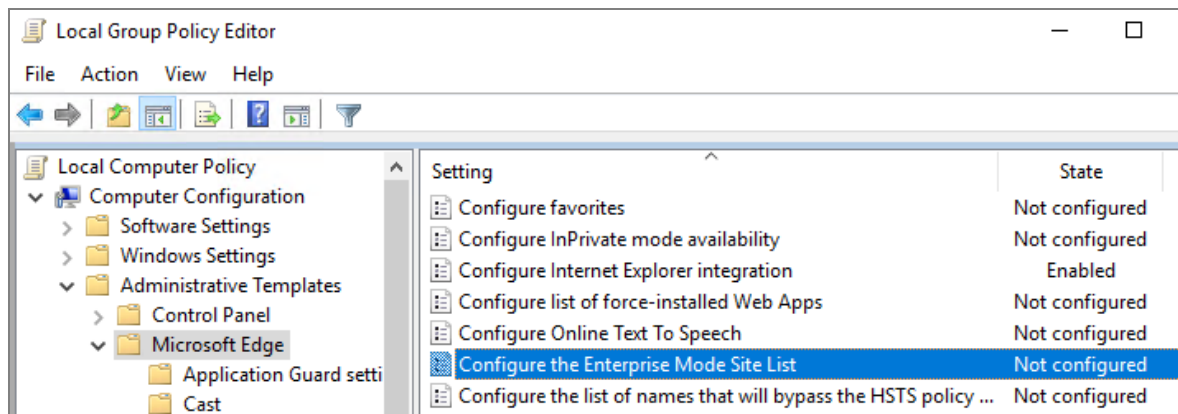

Configuring the Enterprise Mode Site List Policy

To enable IE Mode in Edge you need to configure the Enterprise Mode Site List policy settings in the group policy.

➡ To configure the Enterprise Mode Site List Policy:

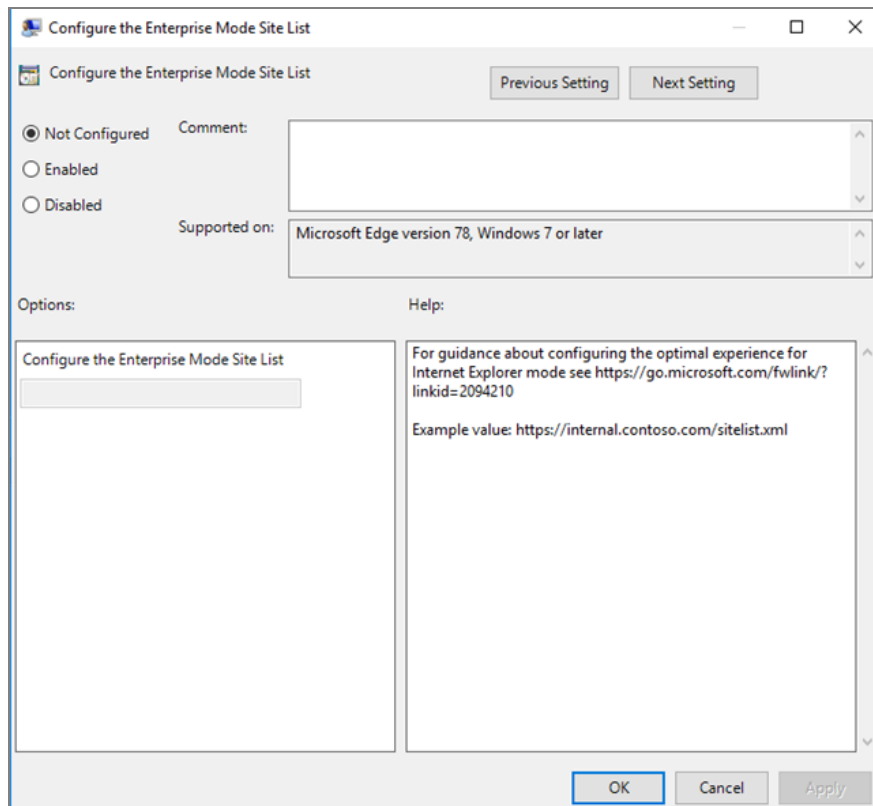

1. In the Local Group Policy Editor (gpedit.msc), under Computer Configuration, browse to Administrative Templates > Microsoft Edge.

View image

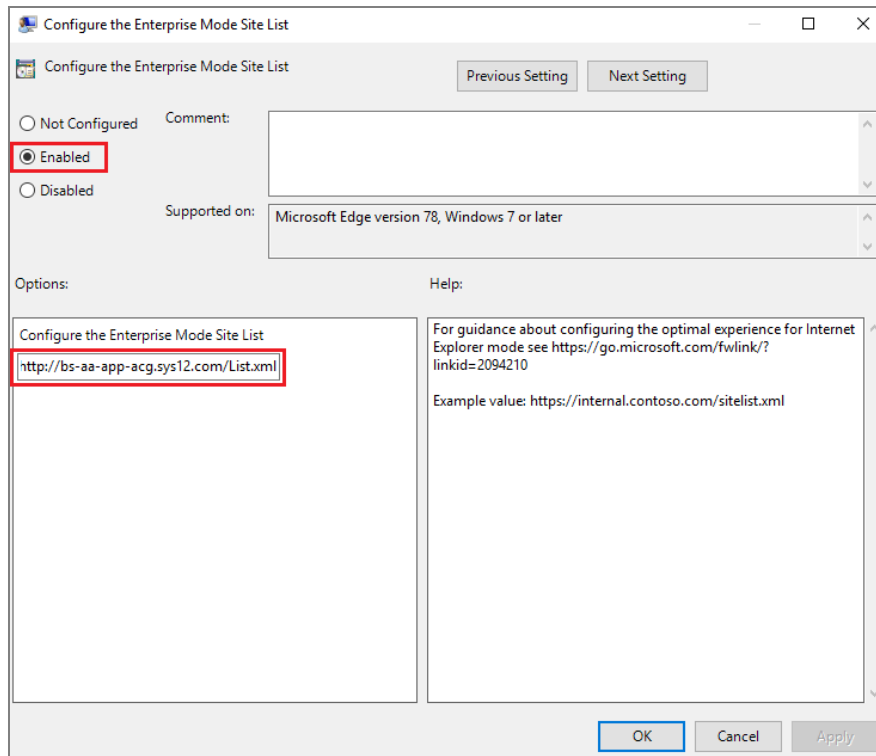

- Click **Configure the Enterprise Mode Site List**. The **Configure the Enterprise Mode Site List** window appears.

View image

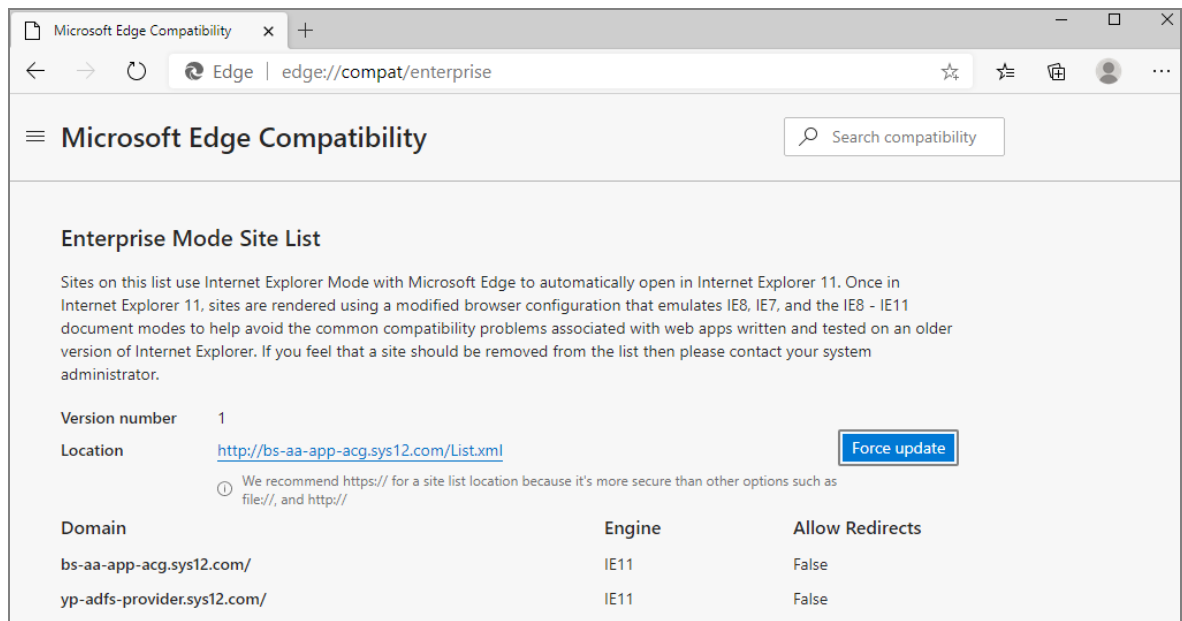

- Select the **Enabled** radio button, then in the **Options** area enter the location of your site list.

View image

4. Click Apply, then click OK to close the Configure the Enterprise Mode Site List window.
5. Open Microsoft Edge, in the address bar, enter `edge://compat/enterprise`, and check if the Enterprise Mode Site List is updated.

[View image](#)

Google Chrome with the IE Tab Extension

This section describes compatibility of the Google Chrome browser with the IE Tab Extension with NICE Web Applications.

Compatibility of NICE Web Applications with the IE Tab Extension in Google Chrome 32/64-bit

Adding the IE Tab to Google Chrome

The IE Tab is an extension that allows you to emulate Internet Explorer, while working in Google Chrome.

➡ To add the IE Tab

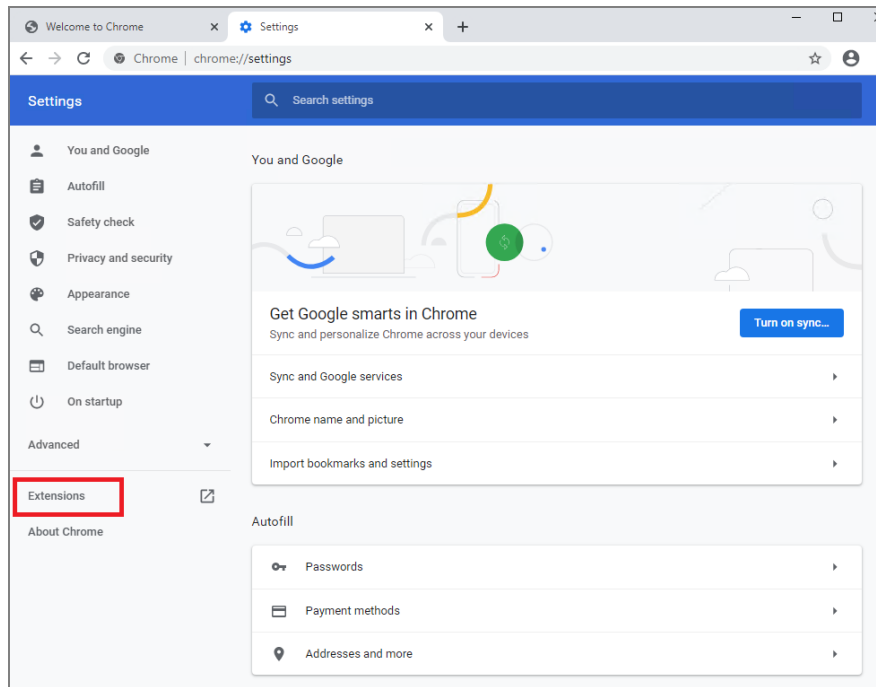

1. Install and start Google Chrome.
2. Click the Customize and Control button and select Settings.

View image

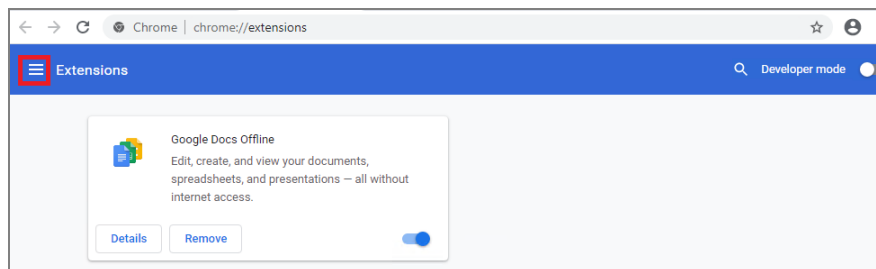

3. In the Settings window, open the Extensions tab.

View image

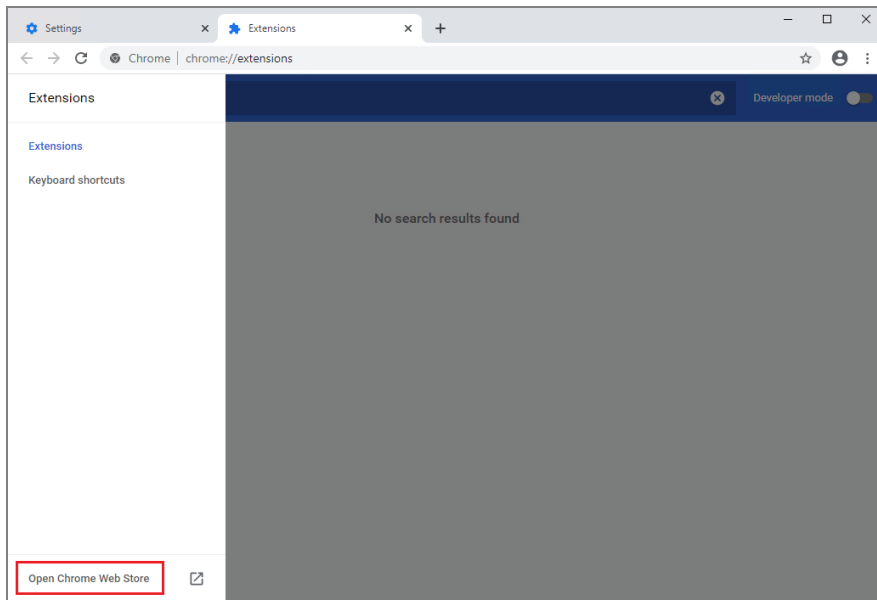

4. Click the Main menu icon.

View image

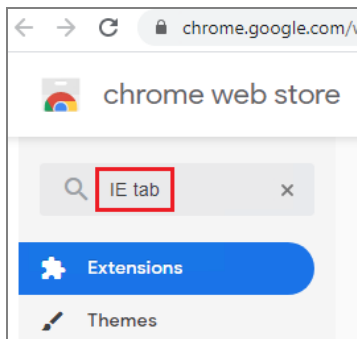

5. Click the Open Chrome Web Store tab.

View image

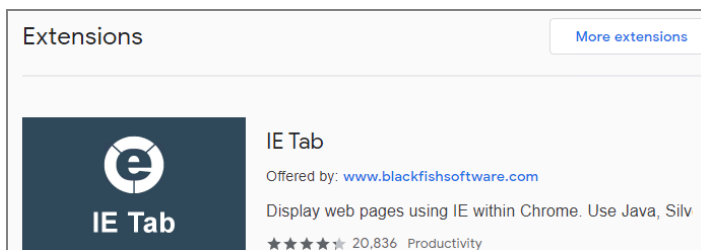

6. In the Search field, type in "IE Tab" and press Enter.

View image

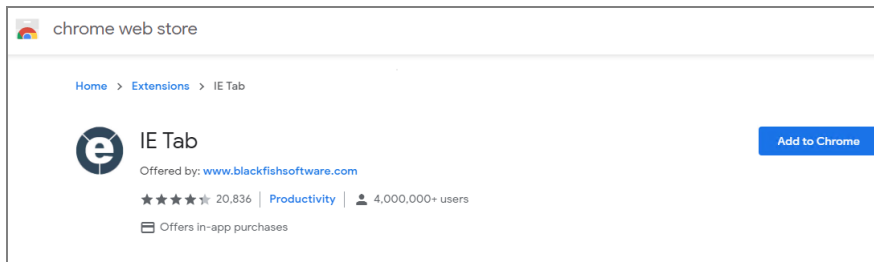

7. In the Search results, find the IE Tab extension and click to open.

View image

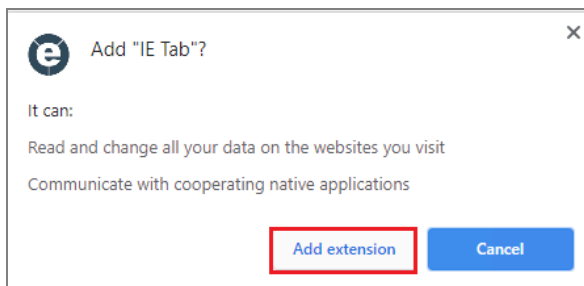

8. Click the Add to Chrome button.

View image

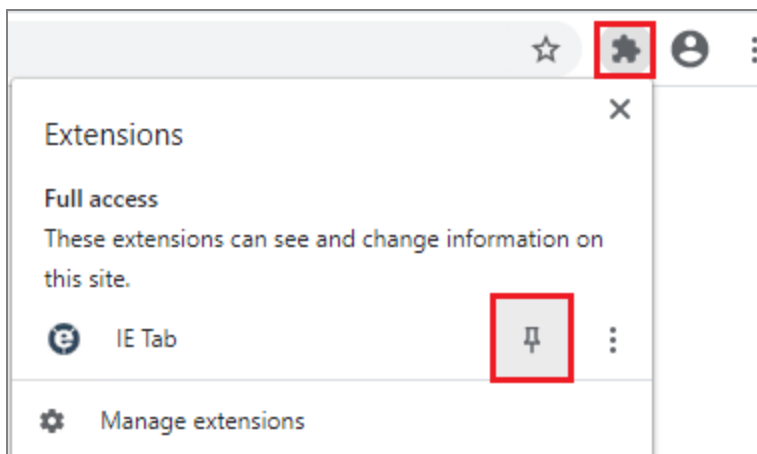

9. In the dialog box that appears, click Add extension.

View image

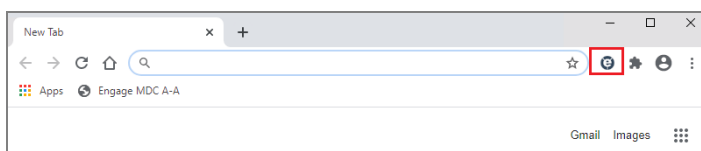

10. Click the Extensions icon, select Pin extension, then click the IE Tab button.

View image

The IE Tab button is added to the Tool bar.

View image

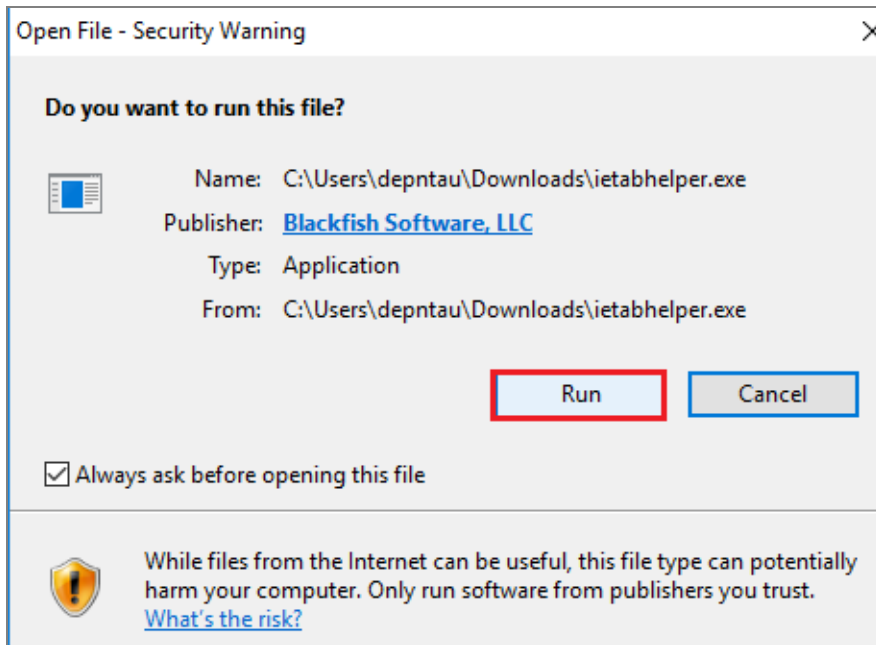

11. The ietabhelper.exe file is automatically downloaded.

View image

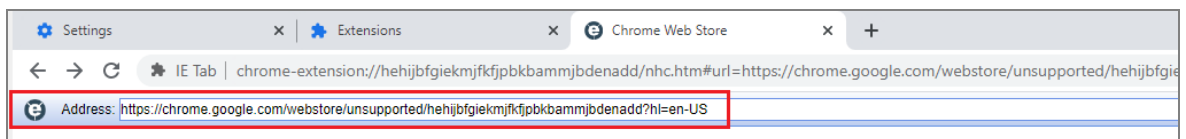

12. Open the ietabhelper.exe file and click Run.

View image

13. The IE address bar is added to Google Chrome.

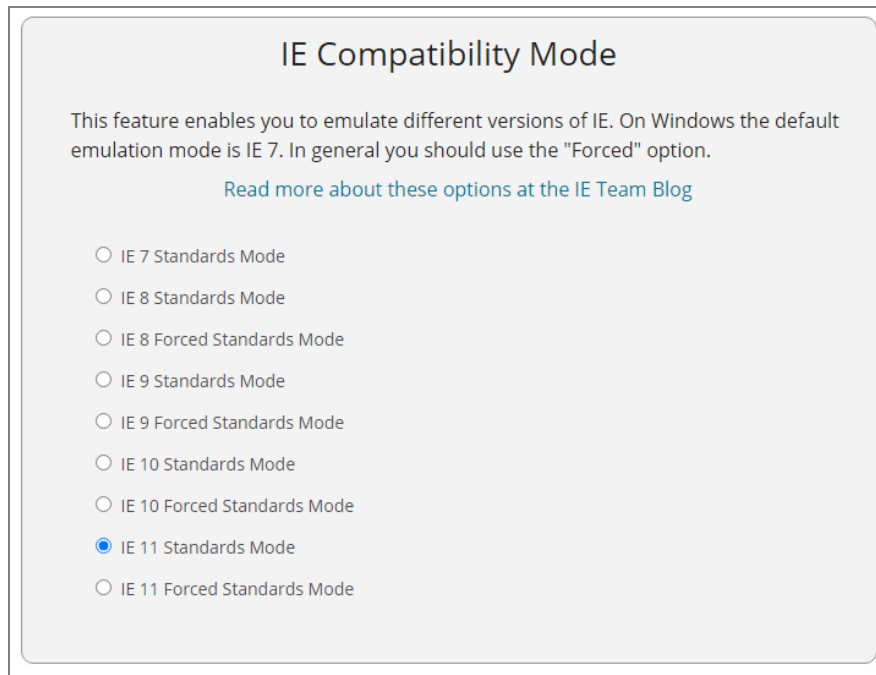

View image

14. Click the Settings button (⚙️).

The IE Tab Options and Settings window opens. Scroll down to the IE Compatibility Mode area and select IE 11 Standard Mode.

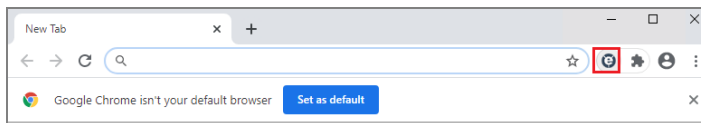

View image

15. Verify that the NICE Engage URL is added to the Trusted sites, see *Adding NICE Engage URL to the Trusted sites* in the Workstation Setup guide.

16. Open Google Chrome and click the IE Tab button that appears to the right of the address bar on the tool bar.

View image

17. In the address bar enter the Engage URL (https://ENGAGE_FQDN/Nice).

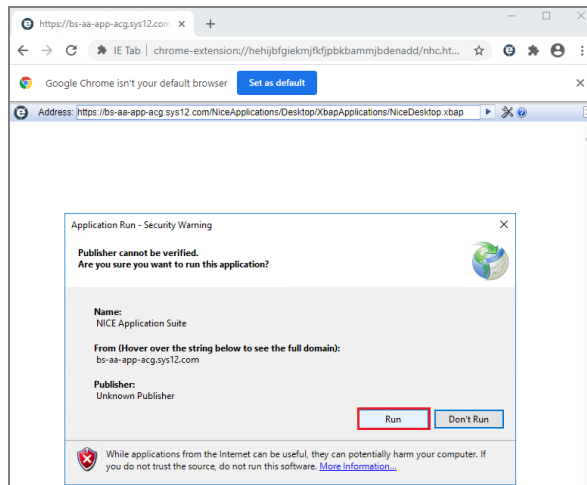

View image

18. Log in to Engage.

19. In the Application Run - Security Warning window click Run.

View image

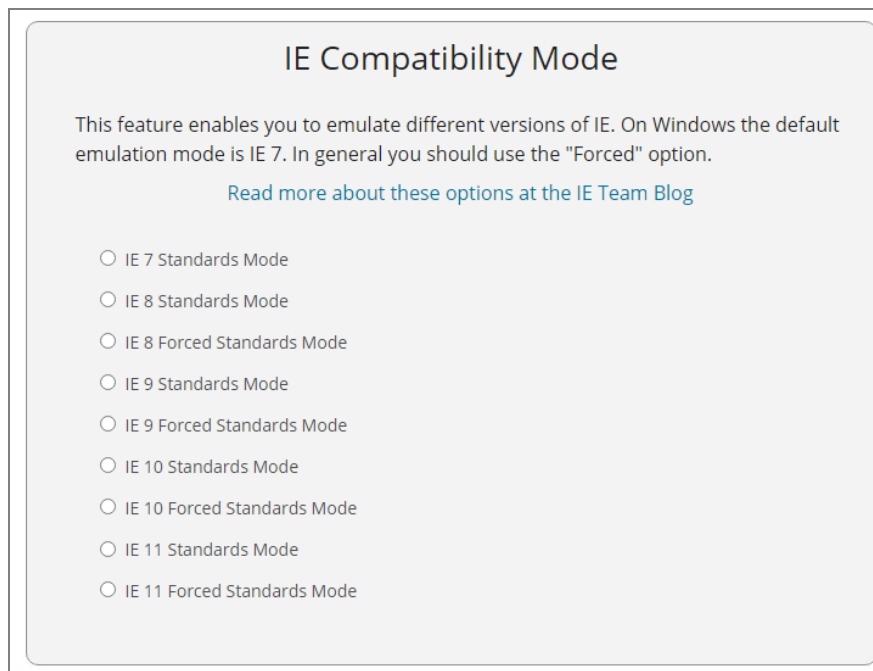

NICE Web Applications Known Issues with the IE Tab in Google Chrome

1. Sentinel Web Client doesn't support Compatibility Mode. However, for IE-Tab it is turned on by default.

➔ To disable the Compatibility Mode:

- a. Right-click the IE Tab button and select Options.
- b. Open the IE Compatibility Mode window and select the Internet Explorer version you want Google Chrome to emulate.

View image

2. Using multiple browser types at the same time, on the same workstation, is not supported in Engage 7.x. *For example*, Microsoft Edge and Google Chrome can't both be open and in use on the same workstation, at the same time.

[This page intentionally left blank]

Microsoft .NET Framework

This section provides information, support, and solutions for Microsoft .NET Framework.

NICE Support for Microsoft .NET Framework

Product	.NET Framework Support
Release	NICE Engage Platform 7.3 and above, NICE Sentinel 7.3 and above, NICE Playback Portal 7.3 (Controlled Release), NICE Playback Portal 7.4, NICE Playback Portal 7.5.
Synopsis	This section describes support for Microsoft .NET Framework (versions 3.5, 4.8, 4.8.1 and 6.0) by NICE products, for NICE Engage Platform 7.3 and above, NICE Sentinel 7.3 and above, NICE Playback Portal 7.3 (Controlled Release), NICE Playback Portal 7.4, NICE Playback Portal 7.5.

Overview

This section provides information regarding NICE products support for Microsoft .NET Framework (versions 3.5, 4.8, 4.8.1, and 6.0).

Microsoft .NET Framework Server-Side Support

The following table lists the NICE release versions and indicates which version supports Microsoft .NET Framework (versions 3.5, 4.8, 4.8.1, and 6.0).

Release Version	Status
	Approved for all environments, except Playback Organizer version 2

Release Version	Status
NICE Engage Platform 7.3 and above	.NET 3.5 Service Pack 1 is required <i>(For Compliance Center only)</i> .NET 4.8 is required on the Applications Server .NET 4.8 is required .NET 4.8.1 is approved .NET 6.x side-by-side with .NET 4.x is approved See the <i>Certified Servers</i> for more details about requirements.
NICE Sentinel 7.3 and above	.NET 3.5 Service Pack 1 is required .NET 4.8 is required .NET 4.8.1 is approved
NICE Playback Portal 7.3 (Controlled Release)	.NET 6.0 is required
NICE Playback Portal 7.4	.NET 6.0 is required .NET 4.8 is required .NET 4.8.1 is approved
NICE Playback Portal 7.5	.NET 6.0 is required .NET 4.8 is required .NET 4.8.1 is approved

Microsoft .NET Framework Client-Side Support

The following table lists the NICE release versions and indicates which version supports Microsoft .NET Framework (Versions 3.5, 4.8, and 4.8.1).

Release Version	Status
NICE Engage Platform 7.3 and above	.NET 3.5 Service Pack 1 is required .NET 4.8 is required .NET 4.8.1 is approved .NET 6.x side-by-side with .NET 4.x is approved See the <i>Certified Servers</i> for more details about requirements.
NICE Sentinel 7.3 and above	.NET 3.5 Service Pack 1 is required .NET 4.8 is required .NET 4.8.1 is approved

Microsoft .NET Framework 4.8 Requirements

NICE Engage Platform 7.3 and above requires Microsoft .NET Framework version 4.8. .NET Framework version 4.8 must be installed on all servers and clients in the site. See *Certified Servers* for a complete list.

Ensuring the Correct XBAP Version on the workstation

In order for .NET Framework 4.8 to work optimally with XBAP, the newest version of XBAP must be installed. If updating a previous version of NICE Engage Platform to Release 7.x, it is required to delete the previously installed XBAP version. At the next login, the new version of XBAP will be installed automatically.

➔ To ensure the correct XBAP version:

- Navigate to C:\Users\<username>\AppData\Local, and delete the Apps folder.

At the next login to NICE Engage Platform, the new version of XBAP will be installed automatically.

Microsoft .NET 6.0 Requirements

NICE Playback Portal 7.5, NICE Playback Portal 7.4, and NICE Playback Portal 7.3 (Controlled Release), require Microsoft .NET 6.0.

ASP.NET Core Runtime 6.0.x – Hosted bundle must be installed on Engage Application server or Playback Portal Stream Server depending on the Playback Portal scale.

For more information, see the *Certified Servers*.

[This page intentionally left blank]

Microsoft SQL Server

This section describes support for the various Microsoft SQL Server versions.

SQL Server 2016

Product	NICE Engage Platform
Release	NICE Engage Platform 7.x NICE Sentinel 7.x

SQL 2016 Standard/Enterprise was certified for the Database Server and Data Mart. Only clean installation is supported. There is no migration/upgrade from previous SQL versions.

For more information see:

- *Requirements and Best Practices for Microsoft SQL Server*
- *Microsoft Cluster Installation for NICE Environments*

SQL Server 2019

Product	NICE Engage Platform
Release	NICE Engage Platform 7.2 and up NICE Sentinel 7.2 and up

SQL 2019 Standard/Enterprise/Developer edition was certified for the Database server, the Data Mart server, the Seamless Key Database server and the SQL Server Analysis services.

Important! SQL Server Developer edition includes all the functionality of the Enterprise edition. However, SQL Server Developer edition is licensed only for applying as a test system, not as a production server.

For more information see:

- *Requirements and Best Practices for Microsoft SQL Server*
- *Microsoft Cluster Installation for NICE Environments*

Additional Third Party Components

This section outlines the additional third party components and their supported versions used by NICE Engage Platform.

Apache Tomcat

NICE Engage Platform uses Apache Tomcat to implement Java Servlet and run the Java-based applications.

Apache Tomcat Version	NICE Engage Platform Release
Apache Tomcat 9.0.64	NICE Engage Release 7.3

ActiveMQ Artemis

ActiveMQ Artemis is a next generation ActiveMQ messaging broker.

NICE supports these ActiveMQ Artemis versions.

ActiveMQ Artemis Version	NICE Release Version	NICE Engage Components
ActiveMQ Artemis 2.23	NICE Engage Release 7.3	<ul style="list-style-type: none"> Monitoring NICE RTA Message Queue
ActiveMQ Artemis 2.27.1	Compliance Center Release 9.1	Compliance Center
ActiveMQ Artemis 2.19	Compliance Center Release 8.13	Compliance Center

RabbitMQ

RabbitMQ is a message broker. NICE supports the following version of RabbitMQ.

RabbitMQ Version	NICE Release Version	NICE Engage Components
3.12.5	Compliance Center 9.2, Compliance Center 9.3	Compliance Center
3.12.5	Playback Portal 7.4, Playback Portal 7.5	Playback Portal

To change passwords for RabbitMQ users, see *Compliance Center Deployment* or *Playback Portal Deployment* deployment.

SAP Products

SAP products are used by NICE Engage Platform in the NICE Reporter application to generate and view reports. Crystal Report deployment includes Oracle JAVA instance.

Below are the supported SAP versions:

NICE Engage Platform Release	NICE Reporter Viewer (Online /Offline)	NICE Reporter Server	NICE Reporter Server and Client Workstations
NICE Engage Release 7.3	09.27.78.01	SAP Crystal Reports Server 2020 SP2, OEM Edition 14.3.2.4073	SAP BO BI Platform .NET SDK 4.3 SP2 14.3.2.4073

SIP Stack

NICE Engage Platform uses the Softil SIP Stack version 7.6.4.

The SIP Stack is upgraded in these components:

- AIR
- VRSP
- Screen Agent
- Stream Server

- Monitor Application

Java 11 Azul

NICE Engage Platform requires Java 11 Azul for some NICE and third party components.

 **Important!** Java 11 Azul must be installed only by NICE Professional Service Engineers, NICE Technical Support Engineers, and Certified Business Partners.

➔ To install or update Java 11 Azul

1. From NICE Software Download Center (SDC), download the Java Azul package.
2. Extract the zulu11.xx.xx-jre11xx.xx.xx-win_x64.msi file, where <xx> is the latest version.
3. Double-click the .msi file to run the Setup Wizard and follow the instructions in the wizard.

NOTE: In the Custom Setup window, the following features are not required:

View image

4. Complete the installation.

[This page intentionally left blank]

Microsoft Kerberos Configuration Manager

Microsoft Kerberos Configuration Manager for SQL Server is a diagnostic tool for troubleshooting Kerberos-related connectivity issues with SQL Server.

The tool performs these functions:

- Gathers information about the operating system and Microsoft SQL Server instances installed on a server.
- Generates reports about all SPN and delegation configurations on the server.
- Identifies potential issues in SPNs and delegations.
- Repairs potential SPN issues.

The tool requires .NET framework 4.0 or higher.

Supported Operating Systems

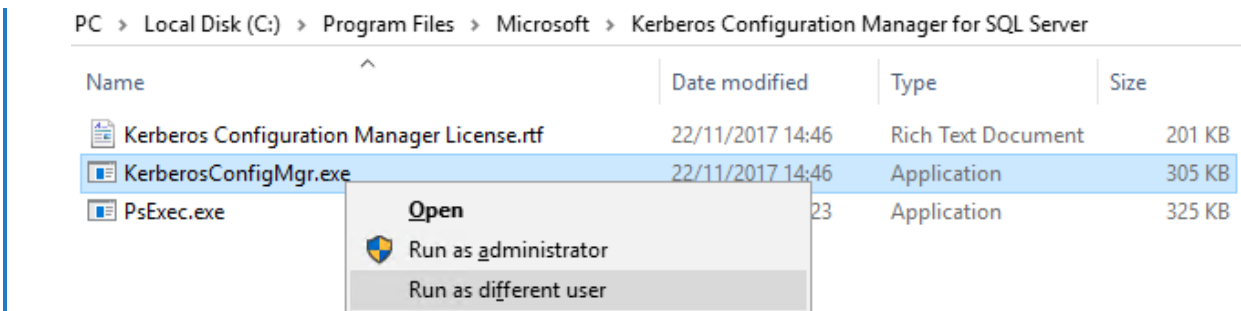

Microsoft Kerberos Configuration Manager for SQL Server supports these operating systems:

- Windows 7/8/10
- Windows Server 2016/2019

➡ To configure Kerberos using Microsoft Kerberos Configuration Manager for SQL Server:

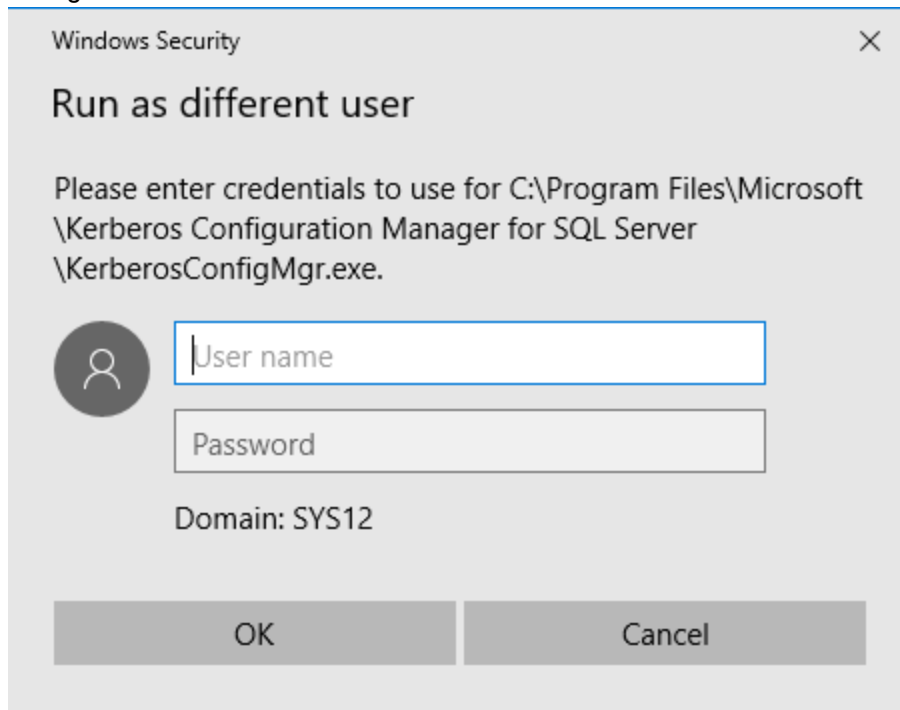

1. Download Microsoft Kerberos Configuration Manager for SQL Server from the Microsoft website.
2. After the installation is complete, go to ...ProgramFiles\Microsoft\Kerberos Configuration Manager for SQL Server.
3. Right-click KerberosConfigMgr.exe, and click Run as different user.

| [View image](#)

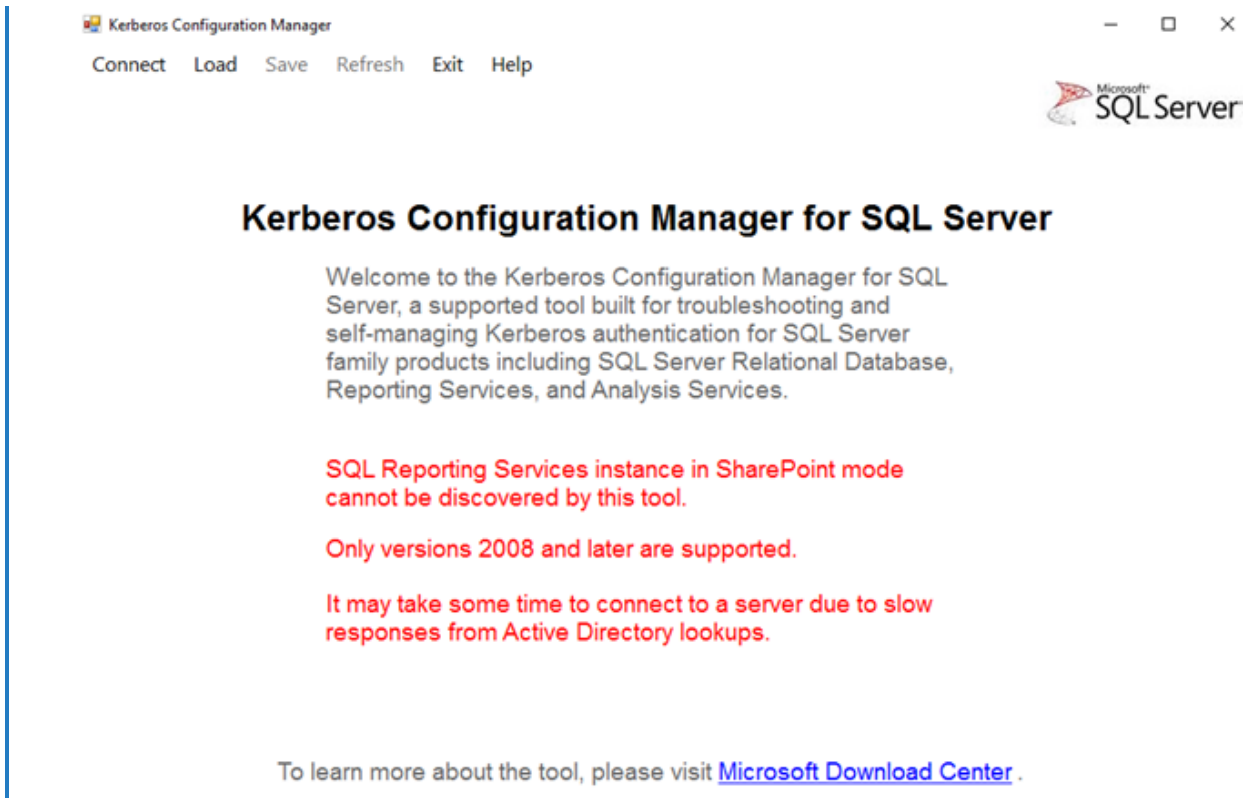

The Run as different user window appears.

View image

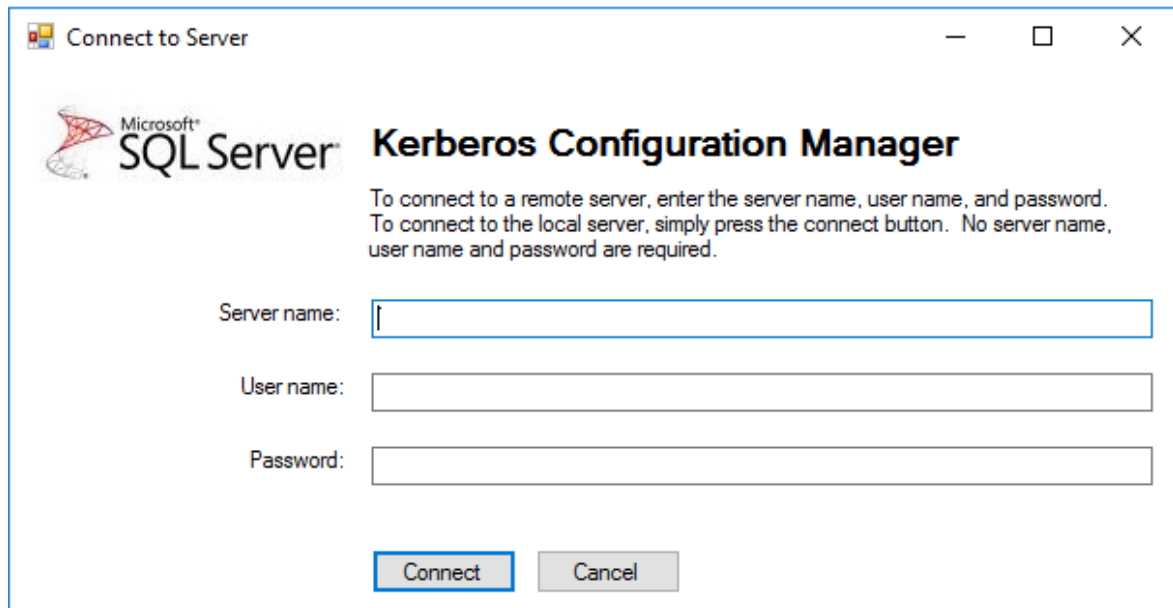

4. Enter the user name and password of the user with privileges to fix the SPN on the server, and click OK. The main Kerberos Configuration Manager for SQL Server appears.

View image

5. Click Connect. The Connect to Server window appears.

View image

6. In the Connect to Server window:

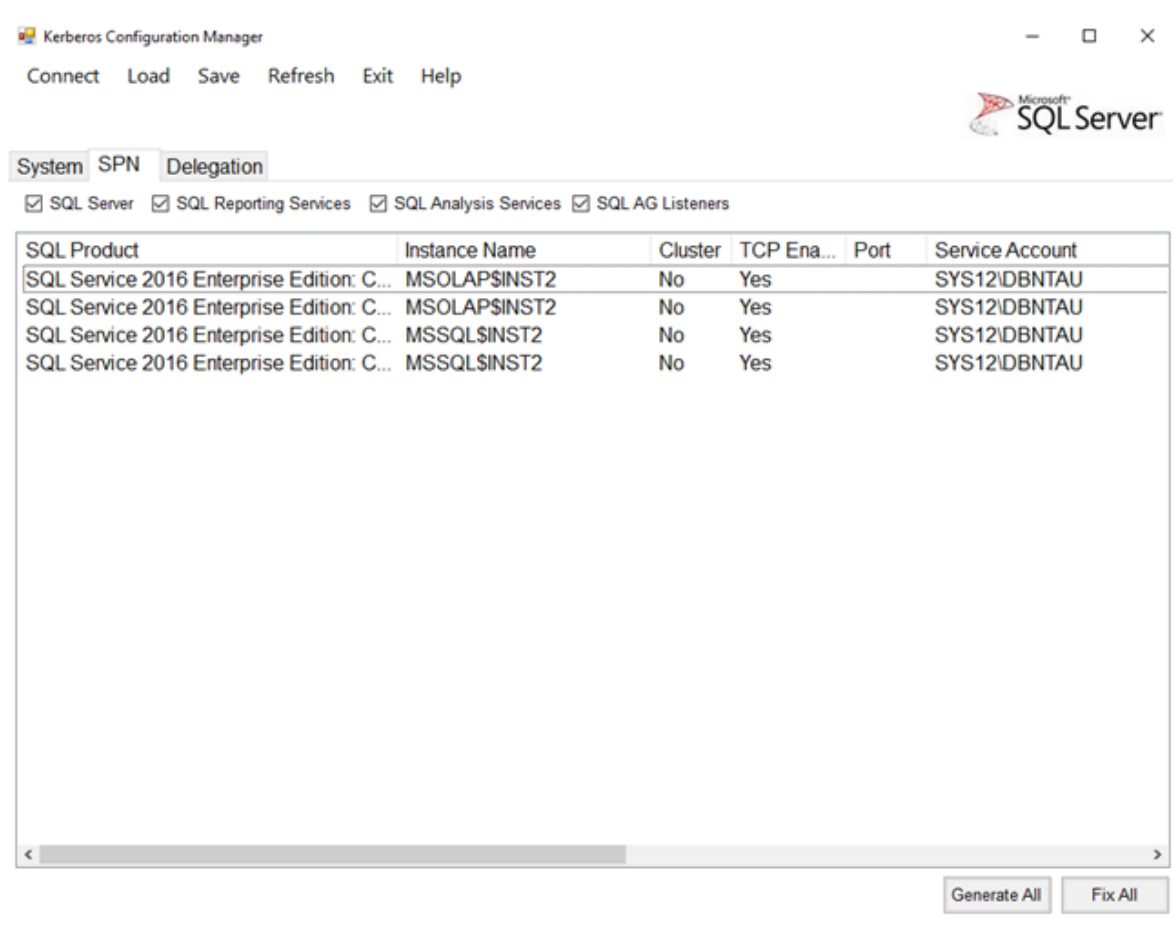

- a. For a remote instance, enter the Server name for the Windows Authentication server, User name and Password .

For a local instance, keep all of the fields empty.

- b. Click Connect.

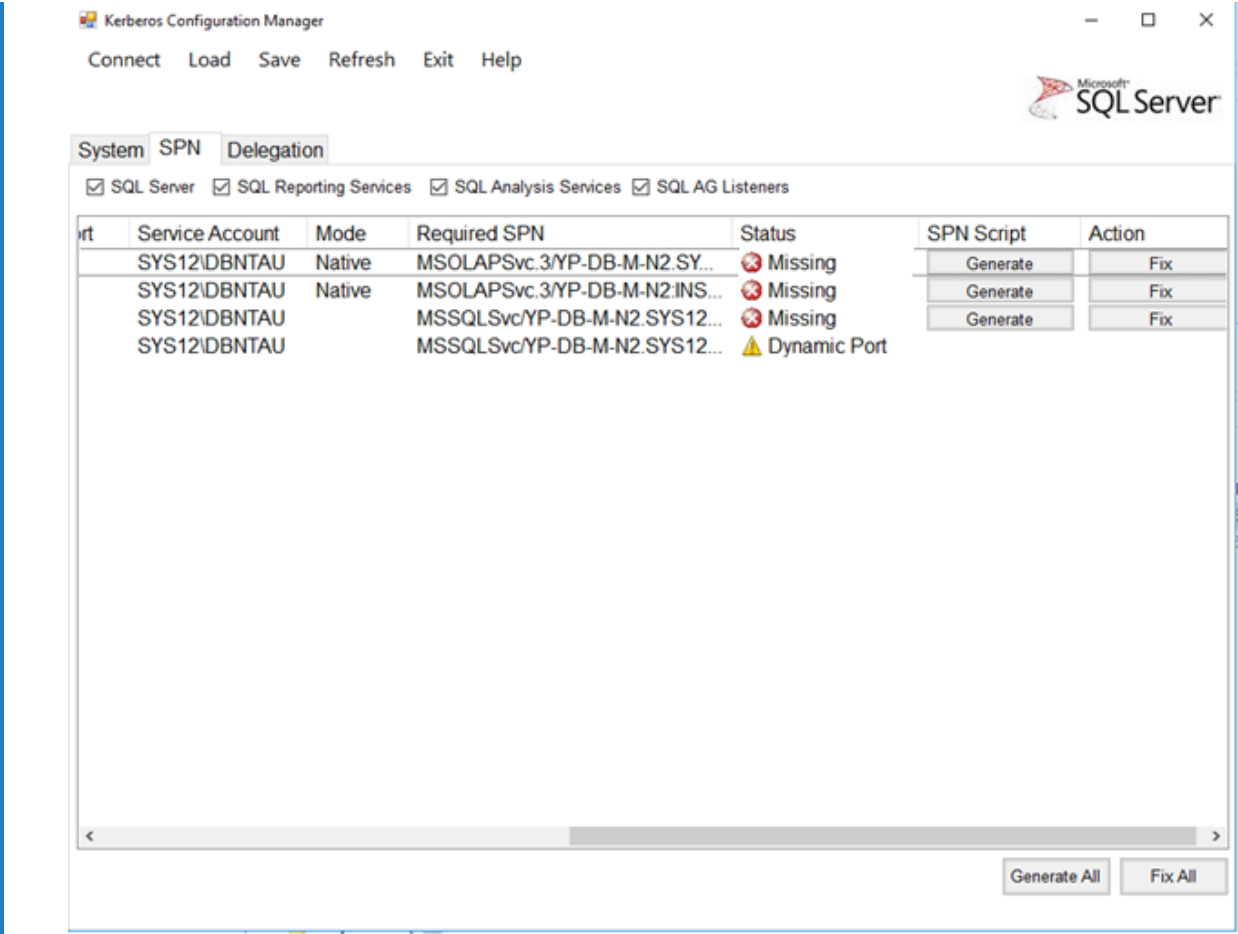

7. After connecting to the instance, click the SPN tab, and select the relevant check boxes to filter the results.

View image

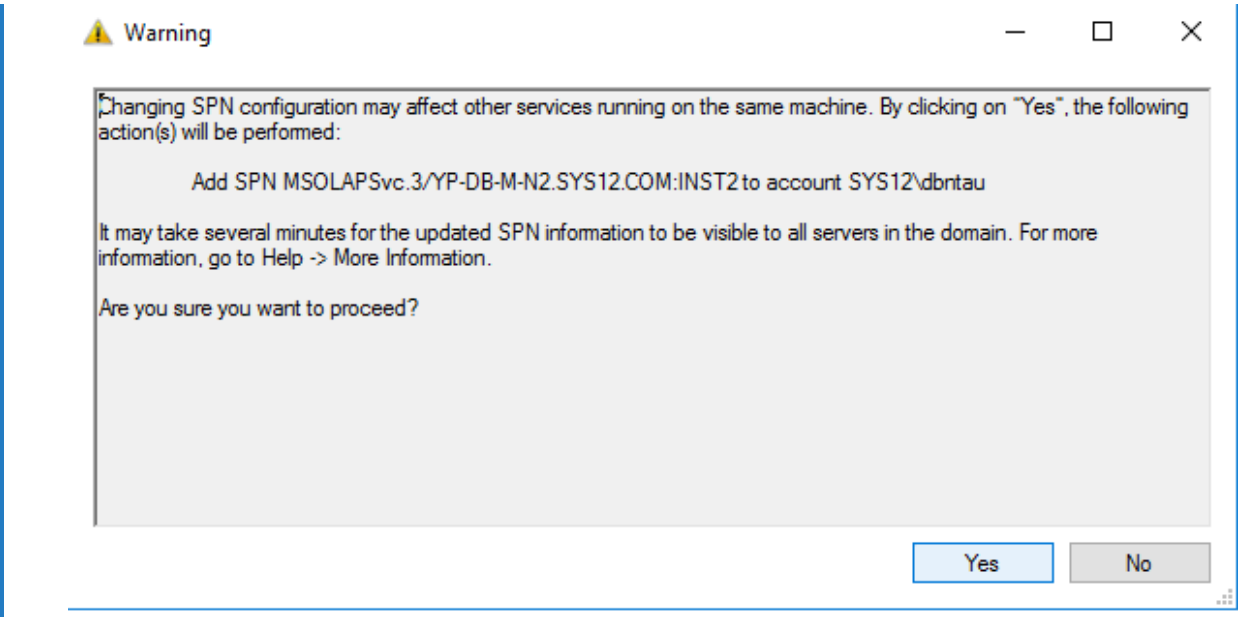

8. Check the status of the registered SPNs. If the status of any of the SPNs is Missing, click Fix for specific SPNs or Fix All to fix all of the ones that are missing.

View image

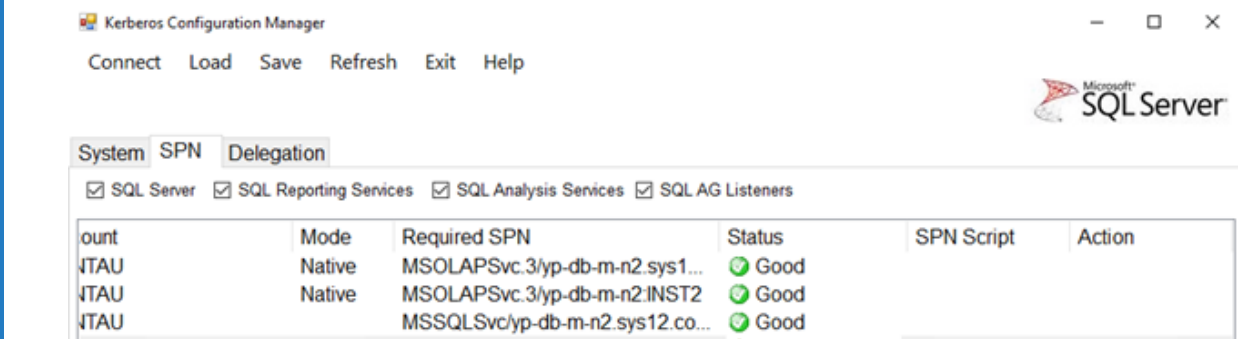

A warning appears.

[View image](#)

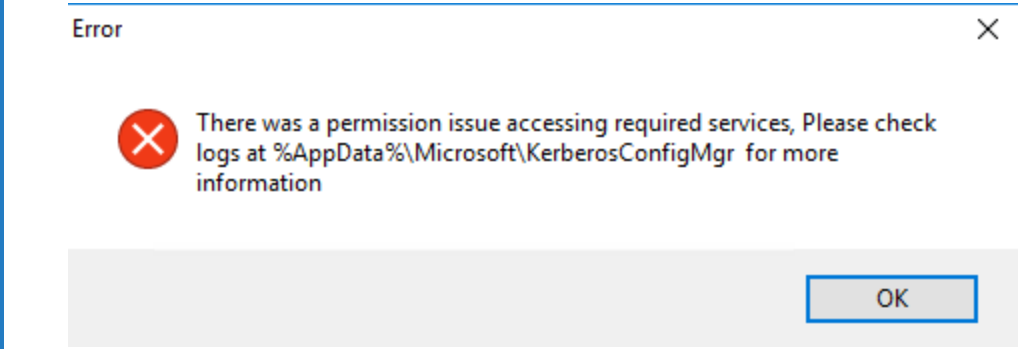

9. Click Yes to start fixing the SPN.
- If the SPN is fixed, the status converts to Good, and the procedure is complete

View image

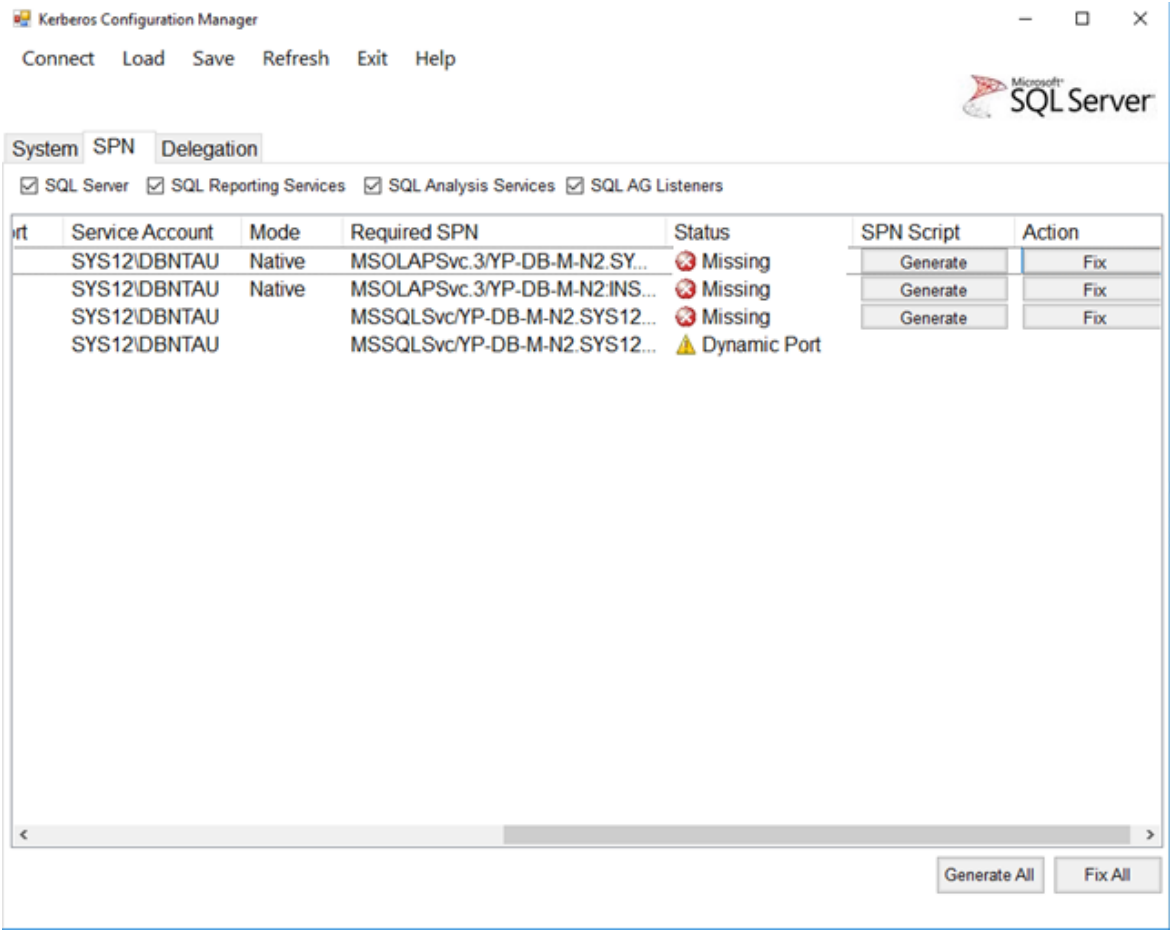

- If you receive a permissions error as shown below, continue to [Step 10](#).

View image

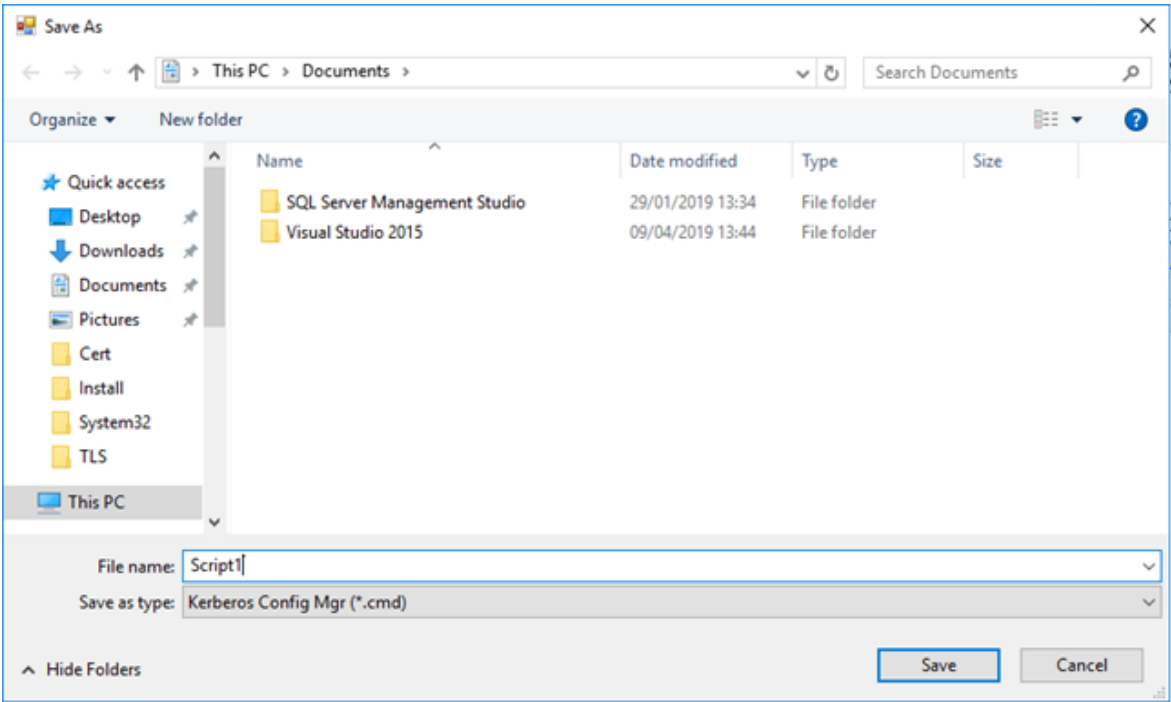

10. *This step should only be performed if you receive a permissions error.* Create a script, and run it as a user with privileges to fix the SPN on the server.
- a. Go to the SPN tab, and click Generate to generate a script for specific SPNs or Generate All to generate scripts for all of the SPNs that are missing.

View image

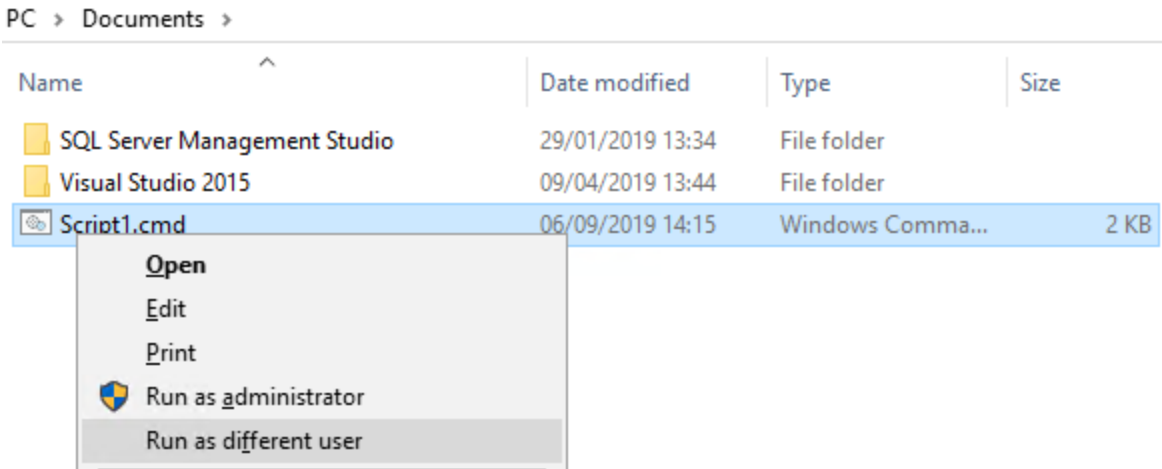

- b. Save the script in your desired location.

View image

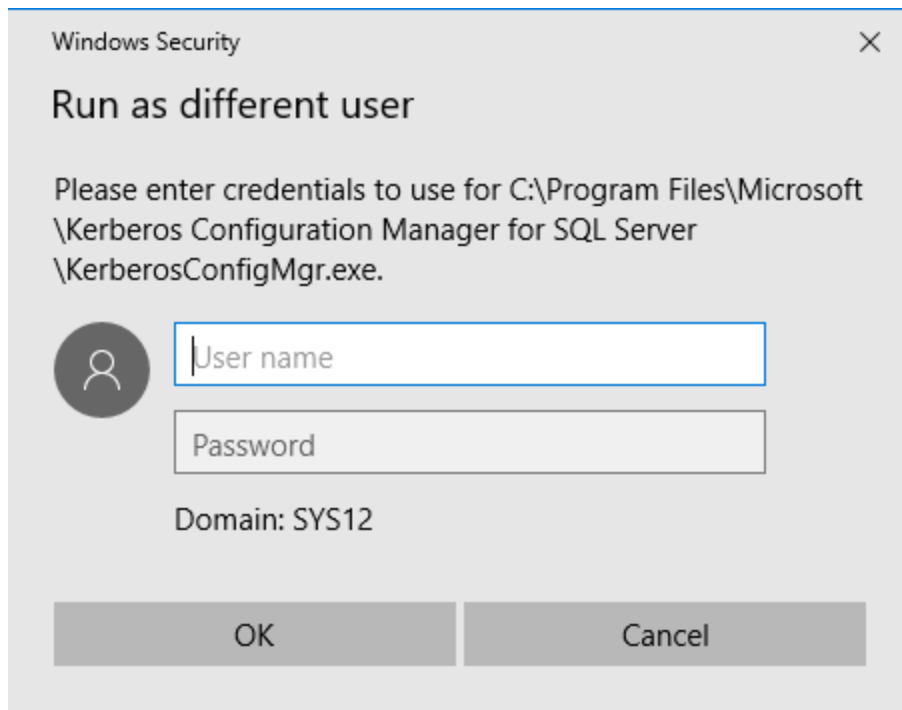

c. Right-click the file with the script, and click Run as different user.

View image

The Run as different user window appears.

View image

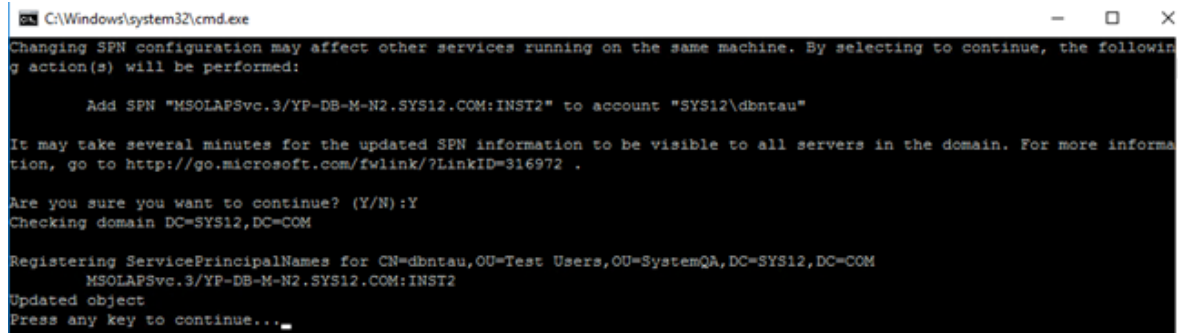

- d. Enter the user name and password of the user with privileges to fix the SPN on the server, and click OK. The cmd.exe will open.

View image

- e. For the question Are you sure you want to continue?, enter Y to fix the SPN.

View image

```
C:\Windows\system32\cmd.exe
Changing SPN configuration may affect other services running on the same machine. By selecting to continue, the following action(s) will be performed:

    Add SPN "MSOLAPSvc.3/YP-DB-M-N2.SYS12.COM:INST2" to account "SYS12\dbntau"

It may take several minutes for the updated SPN information to be visible to all servers in the domain. For more information, go to http://go.microsoft.com/fwlink/?LinkID=316972 .

Are you sure you want to continue? (Y/N):Y
Checking domain DC=SYS12,DC=COM

Registering ServicePrincipalNames for CN=dbntau,OU=Test Users,OU=SystemQA,DC=SYS12,DC=COM
    MSOLAPSvc.3/YP-DB-M-N2.SYS12.COM:INST2
Updated object
Press any key to continue...
```

Microsoft Security Bulletins

This section describes Microsoft security bulletins.

KBs Delivered by Microsoft and NICE Certification Policy

Microsoft launched a new policy in October 2016 where security and non-security packages are released in a cumulative rollup in addition to security update bulletins.

Security update bulletins are approved by NICE on a monthly basis.

Rollups released by Microsoft are not approved by NICE.

Package	Windows 7 SP1, Windows 8.1, Windows Server 2016, Windows Server 2019 (with supported IE versions)	Windows 10 (with supported IE versions and .NET Framework)	.NET Framework	SQL
Separate security KBs				KB delivered by Microsoft and certified by NICE

One KB package with security only Includes KBs that are relevant and non-relevant to NICE	KB delivered by Microsoft and certified by NICE		KB delivered by Microsoft and certified by NICE	
Monthly rollup KB (includes security and non-security) Includes KBs that are relevant and non-relevant to NICE	KB delivered by Microsoft	KB delivered by Microsoft and certified by NICE	KB delivered by Microsoft	

Federal Information Processing Standards (FIPS)

Federal Information Processing Standards (FIPS) are publicly announced standards developed by the U.S. federal government for use in computer systems by non-military government agencies and government contractors. They were issued to establish requirements for various purposes such as ensuring computer security and interoperability.

The U.S. government developed a variety of FIPS specifications to standardize a number of topics including:

- Codes such as standards for encoding data (e.g., country codes or codes to indicate weather conditions or emergency indications).
- Encryption standards, such as the Data Encryption Standard (FIPS 46-3) and the Advanced Encryption Standard (FIPS 197).

Configuring Windows for FIPS

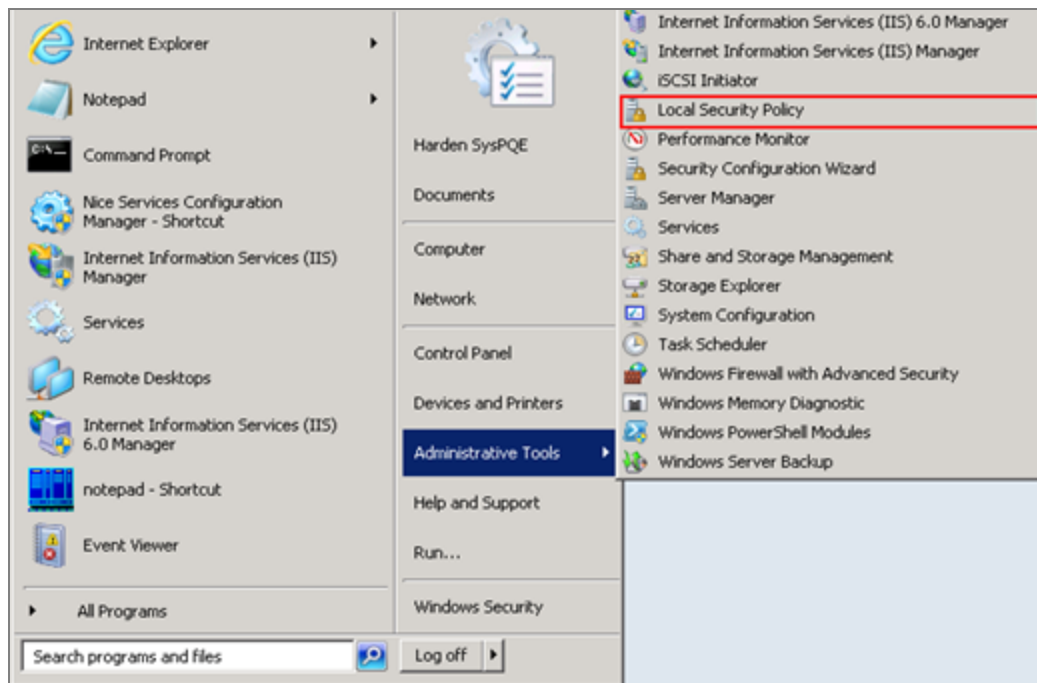

The FIPS mode can be applied on the server or client machine in one of two ways:

- It can be part of the domain policy.
- It can be manually configured on the server or client machine.

➡ To manually apply FIPS mode on the machine:

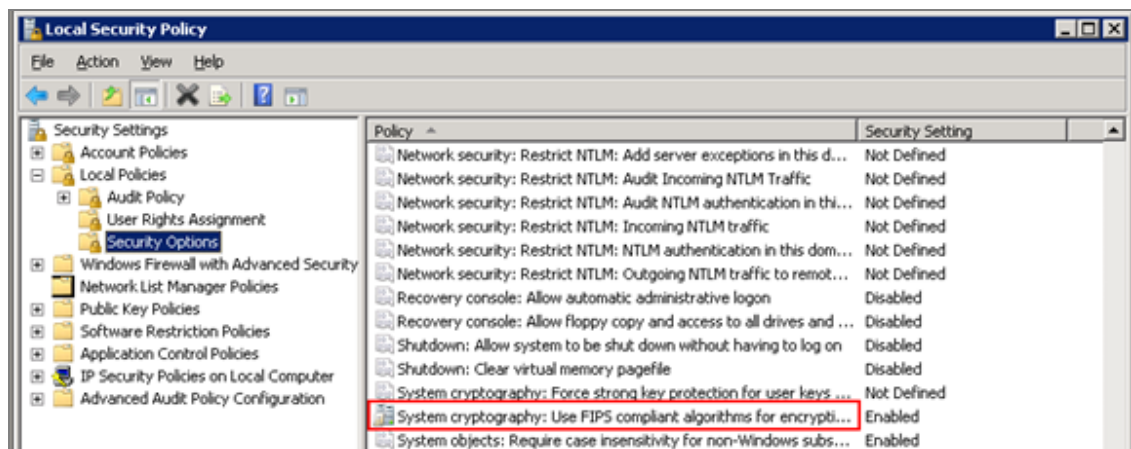

1. Open the Local Security Policy by selecting Start -> Administrative tools->Local Security Policy. Run the Local Security Policy under a user that has privileges to edit the local policy.

[View image](#)

2. In the open window, change the security settings. Navigate to Security Settings->Local Policies->Security Options and select System Cryptography: Use FIPS compliant algorithms for encryption, hashing and signing (disabled by default).

View image

3. Restart all of the servers and clients whose FIPS mode was activated.

FIPS Verification Flow

As part of the Engage Media Encryption solution, we use the AesCryptoServiceProvider class in the Media Encryption Framework (MEF) component. The AesCryptoServiceProvider class is a FIPS 140-2 compliant wrapper of the Microsoft Crypto API, used in Engage for:

- Encryption keys and VI generation
- Data encryption
- Data decryption

NICE Engage Platform 7.x installed on Windows Server 2016 and Windows Server 2019 uses the Enhanced Cryptographic Provider library (RSAENH.DLL), a FIPS 140-2 compliant cryptographic module. The Enhanced Cryptographic Provider library is responsible for verifying that encryption algorithms are FIPS compliant when AesCryptoServiceProvider class is used.

In Windows Server 2019, each call to the Enhanced Cryptographic Provider library routes an API call into the FIPS-certified CNG libraries (or in recent Windows releases to the Kernel Mode Cryptographic Primitives Library) that check and indicate if the specific call is FIPS compliant.

Spell Check Limitation

For secured sites running Insight Manager, Form Designer, Lexicon Manager and Business Analyzer, spell check functionality is not available when FIPS is enabled on the system.

Users will receive the following error when activating the spell check:

Spell check is not available since FIPS (Federal Information Processing Standards) is enabled on this system.

[This page intentionally left blank]

Microsoft Daylight Savings Time Updates

This section provides the Microsoft Daylight Savings Time (DST) updates supported by NICE Systems.

For Microsoft Daylight Savings Time configurations, see the *Maintenance* guide.

Supported in:	Microsoft DST Updates
NICE Engage Platform 7.x	KB 3011843, KB 3013410, KB 3049874, KB 3062741, KB 3062740, KB 3077715, KB 3093503, KB 3112148, KB 3148851, KB 3153731, KB 3162835, KB 3148851, KB 3153731, KB 3162835, KB 3177723, KB 3182203, KB 3192321, KB 3203884, KB 4015193, KB 4012864, KB 4023136, KB 4020322, KB 4486459, KB 4501226, KB 4507704, KB 4519108, KB 4484172, KB 4557900, KB 5052093, KB 5052094, KB 5052077, KB 5053599, KB 5053603, KB 5053596, KB 5053594, KB 5055523, KB 5055528, KB 5055518, KB 5055527, KB 5055526, KB 5055519, KB 5055521

[This page intentionally left blank]

Antivirus: General Antivirus Configuration Guidelines

Customers, business partners, and NICE engineers should use these guidelines for configuring or verifying the configuration of antivirus software.

NOTE: These guidelines are provided for NICE server performance. Customers should make their own risk analysis while implementing these guidelines.

Overview

NICE Systems supports two approaches for antivirus software certification: proactive certification or by using the guidelines in this section.

As part of the proactive approach NICE Systems has certified specific antivirus software applications according to NICE third party software certification policy. For a complete compatibility list, see the *Third Party Technical Guidelines*.

Alternatively, you can use the guidelines in this section and use any antivirus software application. These guidelines are general and designed to ensure the performance of NICE Systems.

Antivirus Real Time Scan

The antivirus scan is a resource consuming action and should not be enabled during working hours. If Real Time Scan is enabled during working hours, it may cause performance issues and interfere with standard system operations.

NICE does not recommend using real time scanning due to numerous risks including, but not limited to:

- Recording loss
- Playback performance degradation
- Impact on archiving queue, possibly leading to archiving failures

Daily Scan

Daily scans should be performed during non-working hours. The folders which appear in the *Folders and Files Exclusion* should not be scanned.

Weekly Scan

Weekly scans should be performed during weekends when the system is idle. Idle time is dependent upon Storage Center and Interactions Analytics load. The folders which appear in the *Folders and Files Exclusion* can be scanned.

Folders and Files Exclusion

Exclude the folders and files in the tables below from your scheduled antivirus scans (Read & Write), since they are used for NICE system operations.

All the paths in the tables below are the default installation paths. If you used a different path in your installation, you must use the same path for the excluded files.

NICE Engage Platform

NICE Components	Default Path	Files
Advanced Interaction Recorder		
■ Package and binaries folder	D:\Program Files\NICE systems\	
■ Log files folder	NiceLogLocation: D:\Program Files\NICE systems\Logs	
■ Metadata Management folder	D:\Program Files\NICE systems\	*.s3db*
■ Advanced Interaction Recorder Storage	E:\Recorder_Storage	*.nmf
■ Archiving Folders	User defined path: <Archiving directory>	*.nmf

NICE Components	Default Path	Files
Applications Server	D:\Program files\NICE Systems	*.exe *.dll *.config *.log
ConnectAPI	D:\Program Files\NICE Systems	*.exe *.dll *.config *.log
CTI / VRSP	D:\Program files\NICE Systems\CTI	
Database Server	E:\<SQL Data Files>	*.mdf
	F:\<SQL Log Files>	*.ldf
Data Mart	E:\<SQL Data Files>	*.mdf
	F:\<SQL Log Files>	*.ldf
SeamlessKey Database	F:\<SQL Data Files>	*.ndf *.mdf
	E:\<SQL Log Files>	*.ldf
Interactions Center	D:\Program Files\NICE Systems\Interactions Center\Bin	
	D:\Program Files\NICE Systems\Interactions Center\Data	
	D:\Program Files\NICE Systems\Interactions Center\Log	

NICE Components	Default Path	Files
NICE Sentinel	D:\<SQL Data Files>	*.mdf
	D:\<SQL Log Files>	*.ldf
	D:\Program files\NICE Systems\NICE Sentinel	*.exe *.dll *.config *.log
Playback Portal Server (7.x)	D:\Program files\NICE Systems\NICE Playback Portal Server	
Playback Portal Database (7.x)	H:\<SQL Data Files>	*.mdf
	G:\<SQL Log Files>	*.ldf
Real-Time Authentication		
■ Enrollment Engine	D:\Program files\NICE Systems\	*.nmf
■ Authentication Engine	D:\Program files\NICE Systems	*.nmf
	C:\windows\system32\MSMQ	*.*
Storage Center NOTE: There is no Storage Center in NICE Engage 7.x clean installation. However, Storage Center can be found if there was an upgrade to 7.x.	E:\<SC_Archive_Directory>	*.nmf
Client-side Component	Default Path	Files
ScreenAgent	C:\Program Files (x86)\NICE Systems\ScreenAgent	

In addition, when any of the NICE servers is configured as a clustered component using Microsoft Failover Cluster (MSCS), cluster-aware antivirus software must be used, and all files in the following folders should be excluded from virus scanning on such servers:

- The path of the \mscs folder on the quorum drive, for example, the Q:\mscs folder.
- The %Systemroot%\Cluster folder.

More information can be found at <http://support.microsoft.com/kb/250355>.

Disabling Firewalls

All antivirus software have integrated firewalls and are installed by default on the systems. Default firewall settings can cause network issues and negatively impact the functioning of NICE's software.

➔ To disable firewalls:

- The default setting for all integrated antivirus firewall software should be changed from Enabled to Disabled. See the relevant documentation for this information.

Live Updates

NICE highly recommends that the antivirus software is updated on a daily basis. It is recommended to schedule the automatic update for a time when the network traffic is low.

Low network traffic refers to customer network and not to NICE Engage Platform system.

CPU Priority

It is recommended to set the CPU usage (utilization) to the lowest value. Note that not all antivirus software allows configuring the CPU usage (utilization).

Additional Configurations

- Buffer overflow protection is a resource consuming application and should therefore be disabled for all NICE Servers.

If you choose to enable this option, you might experience performance issues in your system.

- Heuristic scanning should be disabled in case of performance issues.

Additional Recommendations

In order to maintain performance of your machines during scans, see [Microsoft Virus Scanning](#) recommendations.

| This information is provided for reference purposes only.

Antivirus: Antivirus Software Configuration

This section includes installation instructions and limitations for Antivirus products on client computers and loggers.

NOTE:

- The information in this section refers to software versions only. In addition, customers, business partners, and services must verify that the servers and Loggers meet the minimum hardware requirements as defined by the third party software vendor.
- These guidelines are provided for NICE server performance. Customers should make their own risk analysis while implementing these guidelines.

Configuring Symantec Endpoint Protection

If you are using Symantec Endpoint Protection, do the following:

- [Disable Heuristic Scanning](#)
- [Configure SONAR](#)
- [Configure LiveUpdate](#)
- [Exclude the required folders and files from virus scanning](#)
- [Configure the CPU priority](#)

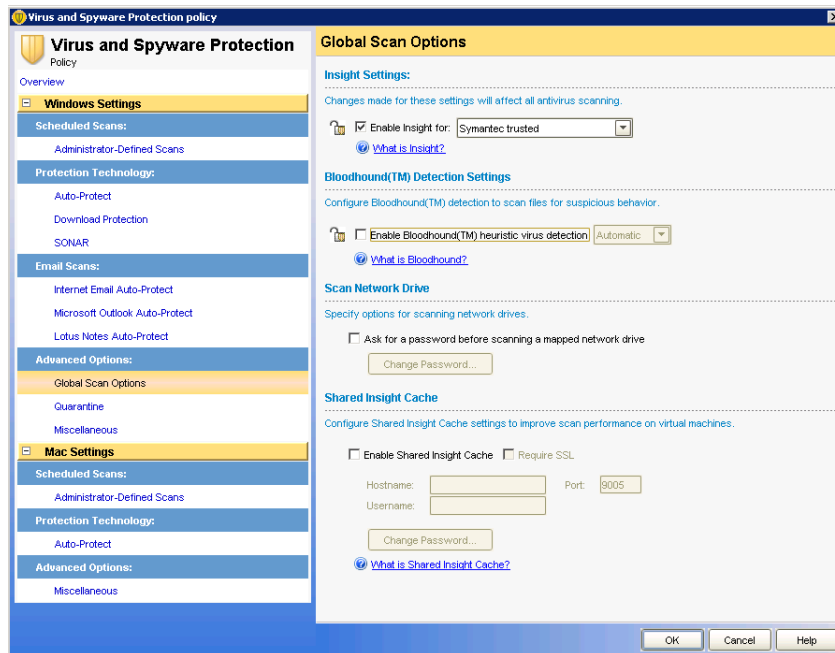

Disabling Heuristic Scanning

➔ To disable heuristic scanning with Symantec Endpoint Protection:

1. Log on to Symantec Endpoint Protection Manager.
2. In the left-hand column, click the Policies tab.
3. In the Policies pane, click Virus and Spyware Protection.
4. In the Virus and Spyware Protection Policies pane, click the appropriate policy that you use from the list.

5. In the Virus and Spyware Protection Policy window, under Windows Settings, click Global Scan Options.

View image

6. Clear the Enable Bloodhound(TM) heuristic virus detection checkbox.
7. Click OK.

Configuring SONAR

SONAR provides real-time protection, detecting potentially malicious applications running on your computers.

SONAR uses heuristics, as well as reputation data to detect emerging and unknown threats. SONAR provides an additional level of protection on your client computers and complements your existing antivirus, spyware protection, and intrusion prevention.

If SONAR impairs performance of servers running NICE software, disable it.

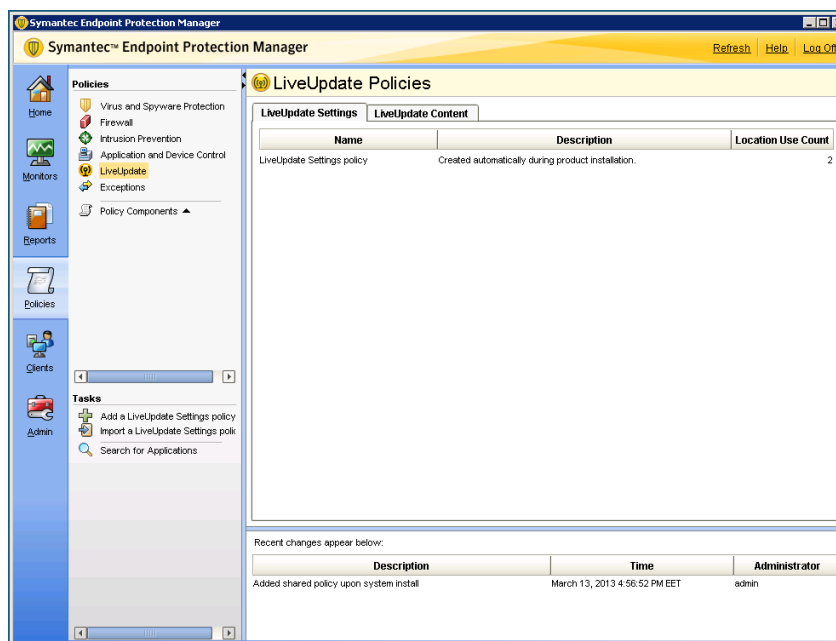

If your system requires SONAR to be enabled, configure all exclusions using the guidelines in the [Folders and Files Exclusion](#) on page 98 section.

Configuring LiveUpdate

➔ To configure live update with Symantec Endpoint Protection:

1. Log on to Symantec Endpoint Protection Manager.
2. In the Symantec Endpoint Protection Manager, in the left-hand column, click the Policies tab.
3. In the Policies pane, click LiveUpdate.

View image

4. In the LiveUpdate Policies pane, on the LiveUpdate Settings tab, click LiveUpdate Settings policy.

View image

5. Edit the policy as required.
6. In the left-hand pane, expand the Schedule section and set an appropriate time for running LiveUpdate.
7. Click OK.

Excluding Folders and Files

Exclude the folders and files specified in [Folders and Files Exclusion](#) on page 98 from your scheduled antivirus scans (Read & Write), since they are used for NICE system operations.

➡ To exclude folders and files

1. Log on to Symantec Endpoint Protection Manager.
2. In the Symantec Endpoint Protection Manager, in the left-hand column, click the Policies tab.

3. Select Extensions.
4. Add an Exceptions policy:
 - a. Go to Exceptions Policy > Exceptions > Add > Windows Exceptions > Folder/Extensions.
 - b. Specify a folder/extension.
 - c. Click OK and then Yes.
 - d. Select a specific group, where to apply the policy.
 - e. Click Assign and then Yes.

Configuring the CPU Priority

➔ To configure the CPU priority

1. Log on to Symantec Endpoint Protection Manager.
2. In the Symantec Endpoint Protection Manager, in the left-hand column, click the Policies tab.
3. Select Virus and Spyware Protection.
4. Select an appropriate policy from the policies list.
5. Go to Windows Settings > Administrator-Defined Scans.
6. Select an appropriate scheduled scan.
7. Go to Edit > Scan Detail > Advanced Scanning Option > Tuning.
8. Select Best Application Performance.

Configuring Trend Micro OfficeScan

If you are using Trend Micro OfficeScan, do this:

- [Configure scheduled updating of the OfficeScan server](#)
- [Configure automatic updating of OfficeScan clients](#)
- [Exclude the required folders and files from virus scanning](#)

■ [Configure the CPU usage](#)

Configuring Scheduled Updating of the OfficeScan Server

➔ To configure scheduled updates of the OfficeScan server:

1. Log on to the OfficeScan management console.
2. In the right-hand pane, go to Updates > Server > Scheduled Update.

View image

The screenshot displays the OfficeScan management console interface. On the left, a sidebar contains a navigation tree with the following items: 'Summary', '+ Security Compliance', '+ Networked Computers', '+ Smart Protection', '- Updates' (expanded), 'Summary', '- Server', 'Scheduled Update' (selected), 'Manual Update', 'Update Source', '+ Networked Computers', and 'Rollback'. The main content area is titled 'Server Scheduled Update' and includes the following sections:

- Current server:** nicevm-3147
- Buttons:** Scan Now for All Domains, Update Server Now
- Enable scheduled update of the OfficeScan server:** A checked checkbox.
- Components to Update:** A list of components with checkboxes:
 - ☒ Networked Computer Components
 - ☒ Antivirus
 - ☒ Anti-spyware
 - ☒ Damage Cleanup Services
 - ☒ Behavior Monitoring Components
- Update Schedule:**
 - Radio buttons for: Hourly, **Daily** (selected), Weekly, every [Sunday], Monthly, on day [01].
 - Start time: [01] : [00] (hh:mm)
 - Update for period of [2] hour(s)
- Buttons:** Save, Cancel

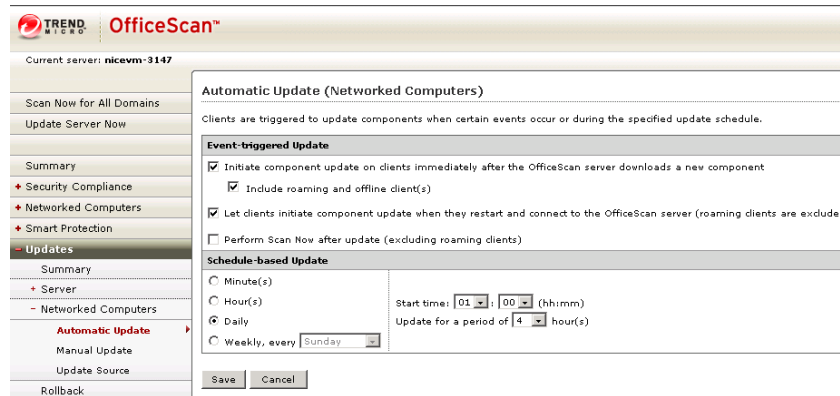

3. Select Enable scheduled update of the OfficeScan server.
4. In the Components to Update section, select the applicable components.
5. In the Update Schedule section, select Daily (highly recommended) and set the applicable parameters.
6. Click Save.

Configuring Automatic Update

➔ To configure automatic update of OfficeScan clients:

1. Log on to the OfficeScan Management console.
2. In the right-hand pane, go to Updates > Networked Computers > Automatic Update.

View image

3. In the Event-triggered Update section, select the checkboxes shown above.
4. In the Schedule-based Update section, select Daily (highly recommended) and set the required parameters.
5. Click Save.

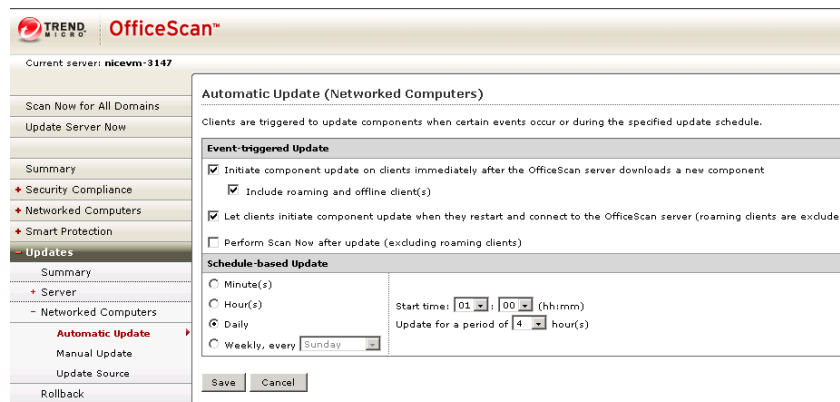

Excluding Folders and Files

Exclude the folders and files specified in [Folders and Files Exclusion](#) on page 98 from your scheduled antivirus scans (Read & Write), since they are used for NICE system operations.

➔ To exclude folders and files:

1. Log on to the OfficeScan Management console.
2. In the right-hand pane, select Scan Now for All Domains.

View image

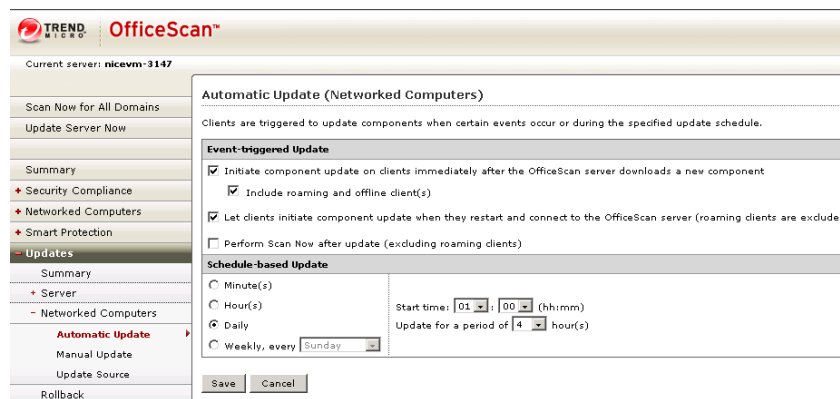

3. Go to Server or servers > Settings > Scan Settings > Select Scan Methods.
4. Define what folders and files to exclude.
5. Click Save.

Configuring the CPU Usage

➔ To configure the CPU usage

1. Log on to the OfficeScan Management console.
2. In the right-hand pane, select Scan Now for All Domains.

View image

3. Go to Server or servers > Settings > Scan Settings > Select Scan Methods.
4. Define the CPU usage level.

5. Click Save.

Configuring Sophos

If you are using Sophos, do the following:

- [Configure scheduled updating](#)
- [Exclude the required folders and files from virus scanning](#)
- [Disable buffer overflow protection](#)
- [Configure scheduled scanning](#)

Configuring Scheduled Updating

➡ To configure scheduled updating

6. Open the Sophos Enterprise Console.
7. In the main window, go to Policies > Updating.
8. Create a new policy (or use the default one), right click it and select View/Edit Policy.
9. On the Primary Server tab, click Advanced and select a bandwidth use.
10. On the Schedule tab, enter an appropriate time.
11. Click OK.

Excluding Folders and Extensions

Exclude the folders and extensions specified in [Folders and Files Exclusion](#) on page 98 from your scheduled antivirus scans (Read & Write), since they are used for NICE system operations.

➡ To exclude folders and extensions

1. Open the Sophos Enterprise Console.
2. In the main window, go to Policies > Antivirus and HIPS.
3. Create a new policy (or use the default one), right click it and select View/Edit Policy.
4. Click the Extensions and Exclusions button.

For Extensions:

f. On the Extensions tab, click the Exclude button.

g. Click Add.

h. Add an extension and click OK.

For Folders:

a. On the Windows Extensions tab, click Add.

b. Select an item type drive or folder and specify location.

Disabling Buffer Overflow Protection

➔ To disable buffer overflow protection

1. Open the Sophos Enterprise Console.
2. In the main window, go to Policies > Antivirus and HIPS.
3. Create a new policy (or use the default one), right-click it and select View/Edit Policy.
4. Select On-access scanning and click Configure.
5. Disable Detect buffer overflows.
6. Click OK.

Configuring Scheduled Scanning

➔ To configure scheduled scanning

1. Open the Sophos Enterprise Console.
2. In the main window, go to Policies > Updating.
3. Create a new policy (or use the default one), right click it and select View/Edit Policy.
4. Under Scheduling Scanning, click Add.
5. Specifying scanning parameters.
6. Click OK.

[This page intentionally left blank]

Antivirus: General Antivirus

Antivirus Certifications for NICE Products

Product	Antivirus Certifications for NICE Products
Release	
Synopsis	This section includes general instructions and limitations for Antivirus Certifications for NICE Products, NICE Products and Antivirus Certifications matrices, as well as procedures for installing antivirus products on client computers and Loggers.

General Instructions

A list of general instructions follows:

- During the installation of the antivirus software, all applications and screens must be closed.
- The same applies when upgrading the antivirus software.
- Scan and Live Updates should be scheduled to run in system idle time.
- Do not run Scan or Live Update during NICE software installation.
- Always set Scan Priority to Low.

General Limitations

- To avoid playback, performance, and retention issues, the destination paths of all Storage Units must be excluded from antivirus scans. See the *System Administrator* for more information regarding setting up Storage Units.
- When installing an antivirus on a cluster, take the following guidelines into account:
 - The antivirus software should be cluster-aware. An application is cluster-aware if it has the following characteristics:

- It uses TCP/IP as a network protocol.
- It maintains data in a configurable location.
- It supports transaction processing.
- On the clustered servers, Microsoft recommends excluding the following folders from antivirus scanning:
 - The path of the \mscs folder on the quorum hard disk. For example, exclude the Q:\mscs folder from virus scanning.
 - The %Systemroot%\Cluster folder.
 - The temp folder for the Cluster Service account. For example, exclude the \clusterserviceaccount\Local Settings\Temp folder from virus scanning.

Trellix ePO

- Trellix ePO 5.10 works with ENS
- Make sure that when using ePO for Microsoft patches update, the configured policy matches the NICE policy concerning Microsoft Windows updates and Service packs.

Trellix

- Make sure to clear the option to install the Trellix firewall. Do not install the firewall, as it would cause network problems.
- It is recommended to set the CPU Utilization for the On Demand Scan in ENS to 10%.
- The ENS feature Buffer Overflow Protection does not allow applications to overflow the buffer, including the CLS Log Manager. This causes the Log Manager to write logs (Channel server, Call server etc.) with a very long delay, or not write them at all. Therefore this feature should be disabled for all machines running CLS. See also TN0640 Trellix ePO 3.5 and ENS Certification for NICE 8.80.

Trellix ENS Certification

The Trellix Endpoint Security (ENS) solution is a fully integrated security solution that protects servers and endpoints against a variety of threats, such as malware, suspicious communications, unsafe websites, and downloaded files. The solution consists of these modules:

- Threat Prevention
- Firewall
- Web Control
- Adaptive Threat Protection

NICE Engage Platform Release 7.x and up are Trellix ENS Threat Prevention 10.7 certified. The Threat Prevention module checks for viruses, spyware, unwanted programs, and other threats by scanning items automatically upon access or on-demand.

Trellix ENS Threat Prevention 10.7 is part of the base certification for NICE Engage Platform Release 7.x and up (see [Antivirus Matrixes for NICE Products](#) on page 121). The Firewall, Web Control and Adaptive Threat Protection modules are not a part of base certification process.

The Trellix ENS Threat Prevention certification process was conducted under these conditions:

- Trellix ENS Threat Prevention ran with these protection features or technologies, which were configured with the default Trellix policy:
 - Access Protection
 - Exploit Prevention (buffer overflow)
 - On-Access Scan
 - On-Demand Scan
- NICE binaries were excluded (see [Folders and Files Exclusion](#) on page 98). NICE binary exclusion is supported by path and file names/types but not by MD5 hash or Signer.
- Full Scan and Live Update tasks were configured for idle time.

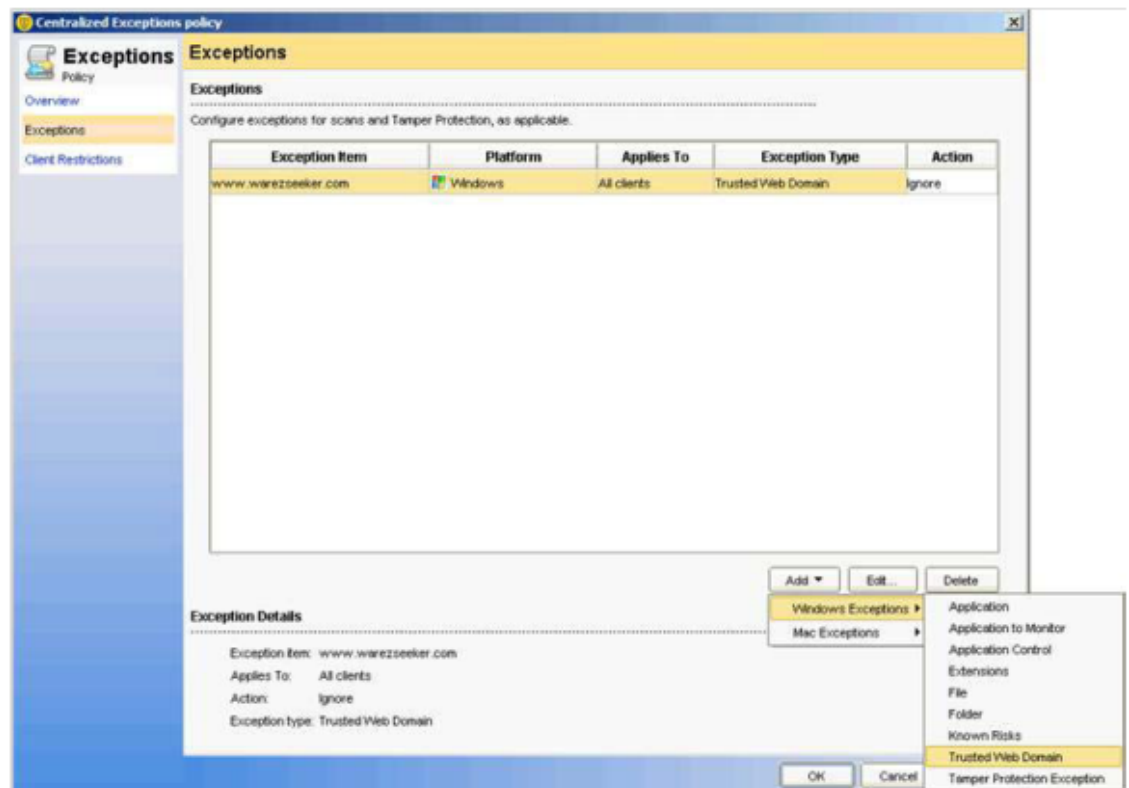

SEP

- NICE Products support Symantec Endpoint Protection.
- In some cases, SEP 12.1 and up can detect NICE or even Microsoft binaries as malware and place them in the Quarantine folder. To prevent false-positive detection, follow the recommendations available in the Symantec white paper *Sizing and Scalability Recommendations for Symantec Endpoint Protection* ([Symantec Endpoint Protection and Endpoint Security](#)).

Exceptions can be added from within the Symantec Endpoint Protection Manager console to provide false-positive mitigation on the client. For example, you can do the following:

- Exclude your domain from Insight detection.

[View image](#)

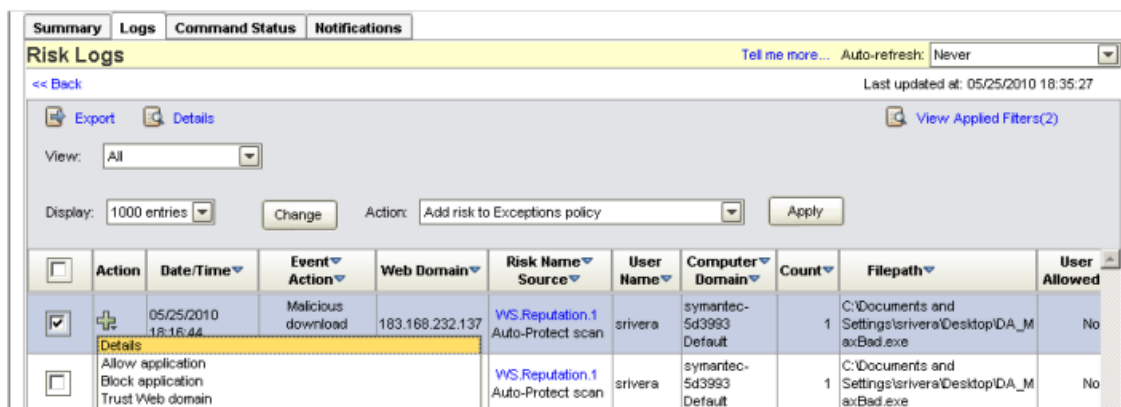

NOTE: You can select Trusted Web Domain, to add a Web domain to the exceptions policy.

- Add exclusions or exceptions for critical files, folders, URLs, and IP addresses.

NOTE: When you add exceptions, you can select more than one application, file, URL, or IP address at a time.

A known-good application can appear in the Risk Logs as a false-positive. You can configure log settings to allow the application and thereby prevent it from appearing in the Risk Log. This same functionality is also available in the SONAR Logs.

View image

For more information, see the *Symantec Endpoint Protection and Symantec Network Access Control Implementation Guide*.

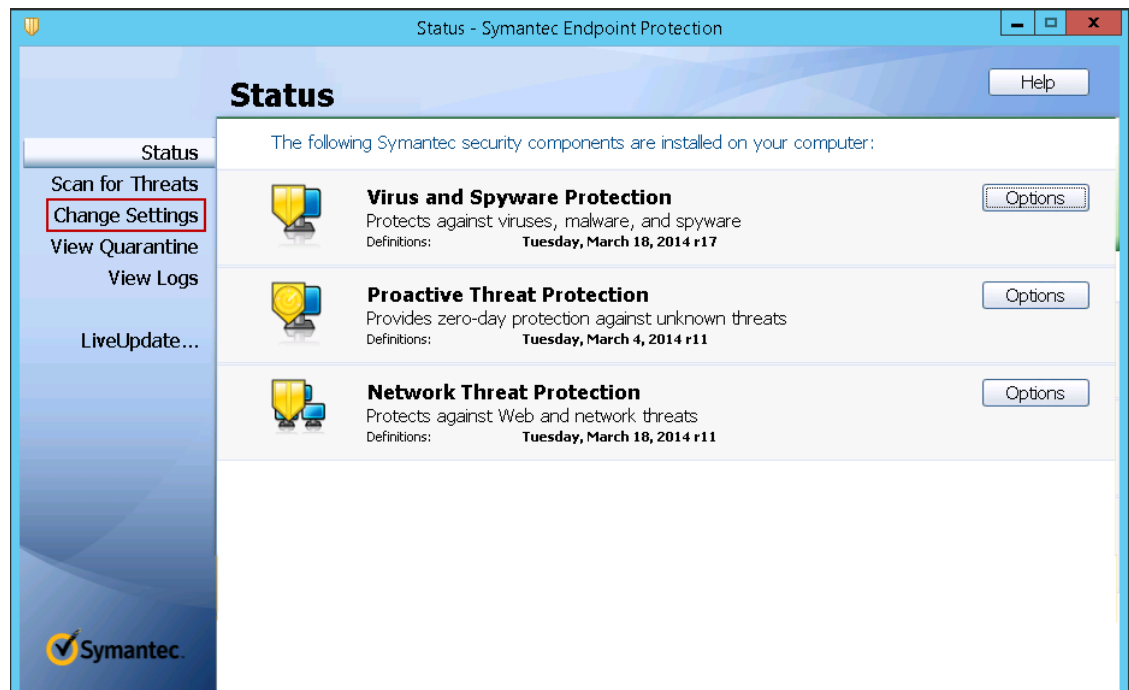

SEP Limitations

Starting with SEP (Symantec Endpoint Protection) version 12.1.2 and up, the SEP firewall causes issues with Microsoft Cluster setup and functionality. To avoid this issue change the SEP settings to allow IP traffic.

➔ To change the SEP settings:

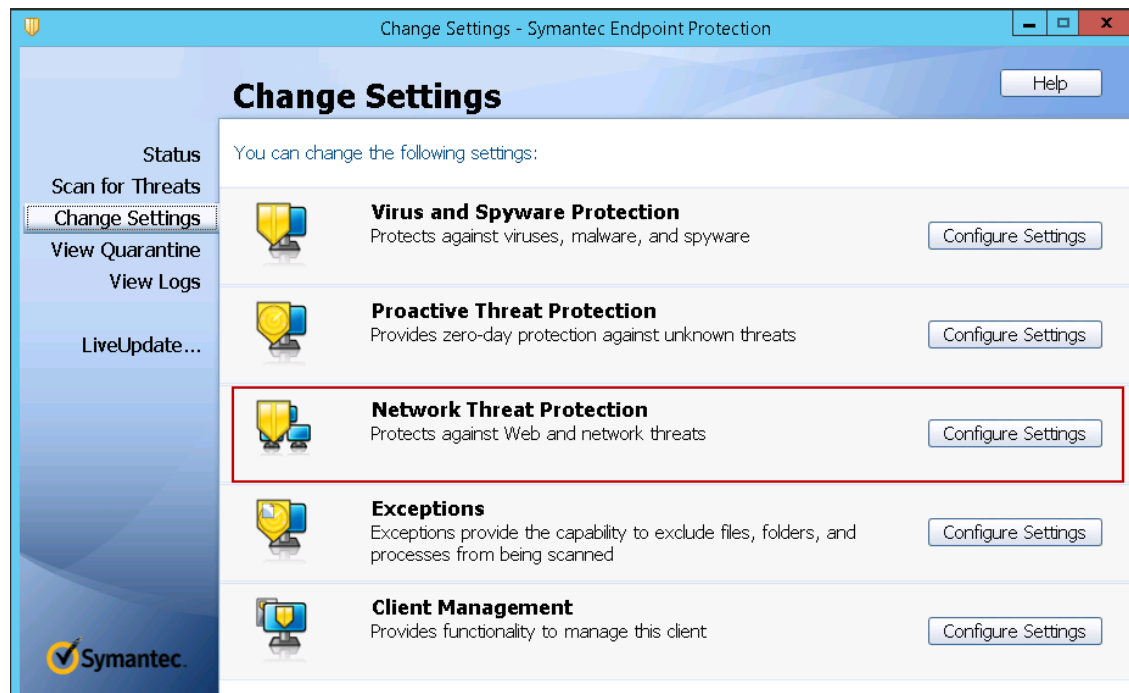

1. Open Symantec Endpoint Protection (SEP).

View image

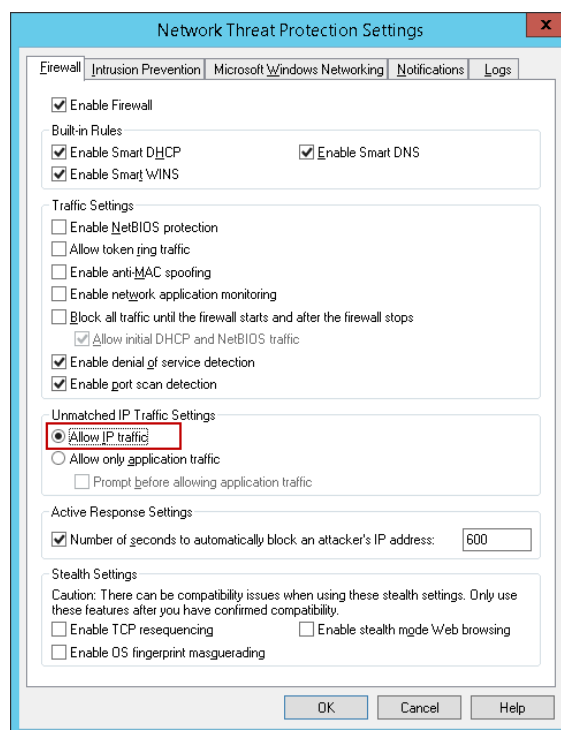

2. In the left column, click Change Settings. The Change Settings area appears on the right.

View image

3. In the Network Threat Protection area, click Configure Settings. The Network Threat Protection Settings window appears.

View image

4. In the Firewall tab, in the Unmatched IP Traffic Settings area, select Allow IP traffic. By default, Allow only application traffic is selected.
5. Click OK.
6. Restart your computer.

Trend Micro

- Trend Micro AV requires that the NICE servers belong to the same domain.

Sophos

- Sophos Exclusions: In a NICE Engage Platform 7.x site with Sophos antivirus deployed, before beginning to use NDM to install or update the site, add psexec.exe to Exclusions list. Otherwise, it can cause a problem with running NDM Agents.

Microsoft Defender Antivirus

Microsoft Defender Antivirus is an anti-malware component of Microsoft Windows. It is built into Microsoft Windows and works with Microsoft Defender for Endpoint to provide protection on devices and in the cloud.

Microsoft Defender Antivirus is the major component of the next-generation protection in Microsoft Defender for Endpoint. This protection combines machine learning, big-data analysis, in-depth threat resistance research, and the Microsoft cloud infrastructure to protect devices (or endpoints) in your organization.

- Supported operating systems:
 - Windows 10 or up
 - Windows Server 2022
 - Windows Server 2019
 - Windows Server version 1803 or up.
- Versions: from 1.371.120.0 and up.

Antivirus Matrixes for NICE Products

Third-Party Software is approved per NICE product for all operating systems certified by NICE.

NICE Engage 7.x Antivirus Support

NICE Products	SEP 14	Trellix ePO 5.10	ENS 10.7	Trend Micro Apex One 2019 SP1	Sophos 10.8	Microsoft Defender Antivirus*
Interactions Server	Y	Y	Y	Y	Y	Y
Playback Server / Telephony Services Server	Y	Y	Y	Y	Y	Y
Storage Center NOTE: There is no Storage Center in NICE Engage 7.x clean installation. However, Storage Center can be found if there was an upgrade to 7.x.	Y	Y	Y	Y	Y	Y
Application Server	Y	Y	Y	Y	Y	Y
Reporter	Y	Y	Y	Y	Y	Y
Database Server	Y	Y	Y	Y	Y	Y
Sentinel	Y	Y	Y	Y	Y	Y

Remote Connection to Customers

This section includes requirements and recommendations for NICE to connect remotely to customers.

NICE Requirements

NICE needs a remote connection in place from the first days of the project. The connection needs to have both high bandwidth and low latency. In addition, it is highly recommended to use a dedicated machine for this connection.

NICE Recommendations

NICE suggests these methods to connect remotely, in order of preference. The customer needs to let the NICE Project Manager know of any site requirements:

1. WebEx - In order to connect through WebEx, the customer must open the Webex connection on their side. Also, playback is not always possible through WebEx. This means that the customer needs to listen to the recording, or download the files locally to send them to NICE.
2. Microsoft Teams - The customer or NICE can set up the Teams meeting.
3. VPN (on VSphere) - Setup can take from four to six weeks to arrange access through VPN on VSphere. This option enables a remote connection even when the customer is not present on the other side.

[This page intentionally left blank]

NICE Third Party Software Certification Policy

This internal policy outlines the procedures to be carried out by the NICE System QA team in relation to validation of security related software compatibility with NICE products.

These conducts and procedures aim to:

- Assure customers of NICE products that the systems and components of NICE are compatible with third party software that are likely to be installed in NICE servers and on client desktops.
- Provide clear guidelines regarding compatibility validation and certification processes for the Professional Services group.
- Allow consistent and efficient work by the System QA team.
- Reduce time and money spent by NICE on a global level, and ensure efficient use of its resources.

This commitment involves delicate balances and trade-offs. Therefore, compatibility validation is limited only to commonly accepted third party software, which directly affects the system's overall security and serviceability.

This policy states general technical guidelines and shall not be construed in a manner which shall impose any type of legal undertaking on NICE. In particular, NICE does not warrant the compatibility of validated third party software with the NICE products, or that the validated security related software will operate error-free, or in an uninterrupted fashion.

NICE Products

For clarity, the tables below list the components that require compatibility validation for the latest versions of NICE Engage Platform. The validation includes all testing required to ensure that the normal functionality of the components and of the entire system is not affected by the introduction of the additional third party software. The compatibility validation testing is related to the specific version of the third-party software. Validation of a specific version of the third-party software shall not guarantee the compatibility of any subsequent version of the third-party software.

The compatibility validation for NICE Engage Platform Release 7.x with the latest service pack and updates includes the following components:

NO.	Component	Operating System	Version
1.	AIR	Windows Server 2016, Windows Server 2019*	
2.	Applications Server	Windows Server 2016, Windows Server 2019*	
3.	Database Server	Windows Server 2016*	
4.	Playback Portal Stream Server	Windows Server 2016, Windows Server 2019*	
5.	Interactions Center Server	Windows Server 2016, Windows Server 2019*	
6.	NICE Sentinel Server	Windows Server 2016, Windows Server 2019*	
7.	NICE Stream Server	Windows Server 2016, Windows Server 2019*	
8.	Storage Center Server NOTE: There is no Storage Center in NICE Engage 7.x clean installation. However, Storage Center can be found if there was an upgrade to 7.x.	Windows Server 2016, Windows Server 2019*	
9.	Telephony Services Server	Windows Server 2016, Windows Server 2019*	
10.	Voice Biometrics Server	Windows Server 2016, Windows Server 2019*	

NO.	Component	Operating System	Version
11.	Playback Portal Database Server	Windows Server 2016, Windows Server 2019*	
* See appropriate Certified Server Guide			

NO.	Component	Operating System	Version
1.	BSF Toolkit	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
2.	ScreenAgent	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
3.	NICE Player	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
4.	ROD/SOD Desktop Application	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
5.	Reporter Viewer	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
6.	Survey Manager	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
7.	Sentinel Client	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
8.	VoIP Recording Agent (VRA)	Windows 7, Windows 8/8.1, Windows 10, Windows 11*	
* See appropriate Certified Server Guide			

Compatibility Validation Policy

All of the NICE products listed in [NICE Products](#) on page 127 are validated for compatibility with the following software:

- Commonly used antivirus software (see list on [page 133](#))

- New versions of Microsoft Windows Operating System (only under product management direction)
- Microsoft .NET Framework - new versions and service packs
- New versions of Microsoft SQL Server (only under product management direction)
- Microsoft SQL Server service packs
- Microsoft Internet Explorer - new versions and service packs
- Microsoft Windows security patches and service packs
- Microsoft Windows security advisory patches
- Microsoft Windows Daylight Saving Time (DST) updates
- Commonly used third party software:
 - Patch management tools (see list on [page 133](#))
 - Remote support tools (see list on [page 133](#))
- Customer's hardening guidelines (only under commitment)

The list of NICE products and their components is regularly updated (on a quarterly basis or on demand) according to the NICE Sunset Policy (refer to the most recent Marketing Note - *NICE Sunset Dates*) and the introduction of new NICE products/components and product/component versions.

When a product version meets its End-of-Mainstream Software Support Date, it is no longer validated for any of the above mentioned software, except for Microsoft security patches, security Advisory patches, Daylight Saving Time updates and service packs, as well as Internet Explorer updates (but not new versions of Internet Explorer), for which validation for compatibility will continue until the product version's End-of-Extended Software Support Date is met.

NOTE:

- End-of-Mainstream Software Support Date - The final date when NICE will cease to provide code fixes and changes for a product version.
- End-of-Extended Software Support Date - The final date when NICE will cease to provide critical code fixes and changes for a product version. Requests for third-party software certifications may require an upgrade to a newer minor/major release.

Validation of the above mentioned software ceases when Microsoft no longer supports the respective operating system required to run this product version (for example, when Microsoft ceases to release patches and service packs for the operating system in question).

[Show example](#)

The end of support date for Windows 2003 is July 14, 2015. The end of support date for Windows XP SP2 is April 4, 2014.

A compatibility matrix of NICE products/components and product/component versions vs. Microsoft or third party software and software versions is maintained and tested by the System QA team.

When a new NICE product/component or a new version of a product/component is introduced, it is added to the compatibility matrix. See [Compatibility Matrix](#) on page 138.

Based on agreement with Product Management, an older version of a product/component or a third party software may be omitted from the compatibility matrix, in the following cases:

- A version is no longer commonly used by NICE customers. For example, an older version of an antivirus software (two or more years older), will be omitted from the compatibility matrix since antivirus software is usually replaced once a year with a newer version, and most customers switch to the newer version shortly after its release.
- Both Product Management and R&D view the newer version of a NICE product/component as an evolutionary (rather than revolutionary) step in the development of the product/component and the testing of the newer version fully ensures, in high probability, the compatibility of older versions. Hence, the older version is omitted from the compatibility matrix.

Compatibility Validation Process

The System QA team develops and publishes comprehensive test procedures for each type of compatibility validation.

The System QA team is in constant contact with local third party software vendors who are included in the compatibility matrix, and proactively checks for new updates at least once a month. The System QA team maintains an internal list of planned validations, listing details of vendors' software release dates, and the appropriate NICE validation target dates stipulated in this policy.

In addition, the System QA team can be assigned to validate the compatibility of third party software that is not included in the compatibility matrix, if requested by Product Management, and subject to a commitment. The System QA team will be asked to provide a timetable dating from ARO (After Receipt of Order), and include this one-time validation in its list of planned validations. In this case, the System QA team will not be required to proactively track and validate future software version compatibility.

The System QA team notifies the EIS Technical Writing group of expected new compatibility validations, and regularly informs the Technical Writing group of validation status changes. The Technical Writing group publishes and maintains this information in the [Documentation Hub](#). This information includes the following validation details:

- Vendor name

- Third party software name
- Software version
- Software release date – which can also be a future date
- Validation completion target date
- Validation status. The following status options are applicable: Pending software release, Pending validation, Under validation, Validated.
- Last status update
- Comments. The comments may include a link to a relevant technical note.

Upon the completion of the compatibility validation, and no later than 10 business days thereafter

(5 business days in case of validation of Microsoft high risk security patches, see [Microsoft Security Patches](#) on page 135), the System QA team updates the *Third Party Technical Guidelines*, specifying the newly validated software. This update may also include validated third party software limitations and recommended installation guidelines for NICE products. Before appearing in the *Third Party Technical Guidelines*, these updates are sent to Product Management for approval.

Compatibility Validation by Professional Services

The System QA team develops and publishes comprehensive test procedures (ATP) adequate for compatibility validation of third part software categories not included in the compatibility matrix, as listed below:

- Antivirus and endpoint protection
- Intrusion detection and prevention
- File integrity
- Log collection
- Backup agent
- Monitoring agent
- Remote access
- Patch management and distribution
- SOE and customer certified OS build

Third party software not included in the compatibility matrix is validated for compatibility according and subject to the following process:

1. A Commitment Request is filed by the Solution Engineer responsible for the project, providing the full details of the project.

2. Product Management evaluates the commitment and forwards it to the System QA team if required. A detailed test plan (ATP) is provided based on the type of software.
3. Product Management assigns the commitment to the regional Professional Services team, who provide a timetable dating from ARO, and a cost estimate.
4. When off-site staging is required, the regional Professional Services team takes responsibility for execution.
5. The Professional Services team runs the ATP on-site, to validate the software compatibility on NICE servers.
6. The completed ATP is re-submitted to the System QA team for approval. If additional or repeated testing is required, the System QA team instructs Professional Services accordingly.
7. The System QA team supports the software for the validated version only. Future versions of the software are not proactively tracked or validated by the System QA team or Professional Services.
8. the System QA team makes a reasonable effort, time and money-wise, to diagnose and solve problems if the arise. If no reasonable solution is diagnosed and/or found, NICE is not held responsible, and the software is removed from NICE servers.
9. Once verified, a Verification Statement is be published by the Services Manager, describing the environment in which the verification is applicable. Any change to the environment (including software upgrades), voids the verification.

Compatibility Validation Guidelines

These are the guidelines by which all of the NICE products are validated for compatibility with the following software:

Antivirus Software

The System QA team regularly validates the most commonly used antivirus software. As agreed with Product Management, this list currently includes:

- Symantec AntiVirus Corporate Edition
- Trellix ePO and ENS
- Trend Micro OfficeScan
- Sophos Endpoint Security and Control

Usually, customers replace antivirus software versions soon after the release of a new version by the vendor. Therefore, the System QA team is required to test and validate only the last two most recent *major releases* of the above mentioned antivirus software packages. Minor releases are supported when major releases have been certified. For the complete antivirus compatibility matrix, see the [Antivirus: General Antivirus](#) on page 115 section.

Other antivirus software packages may be validated on demand, based on commitment.

The System QA team is in constant contact with the local antivirus software vendors, and proactively checks for new updates at least once every quarter.

Validation of a new antivirus software version will take place no later than 45 business days after its general availability.

Microsoft Windows Operating System

The System QA team validates NICE products for compatibility with a new *major version* of Microsoft Windows Operating System (OS) within 60 business days following the Microsoft official release. This refers to Windows editions planned to be in use by NICE products, servers, and clients, under Product Management direction.

Compatibility validation of a new version of Windows OS includes validation of the most recent available version of Internet Explorer.

Microsoft Service Packs

The System QA team validates NICE products for compatibility with Microsoft service packs within 30 business days following the Microsoft official release.

Microsoft .NET Framework

The System QA team validates NICE products for compatibility with Microsoft .NET Framework new versions and service packs within 30 business days following the Microsoft official release.

The System QA team compatibility validation ensures that the normal functioning of NICE applications is not effected by the new .NET Framework software if installed simultaneously on the same desktop with the .NET Framework version utilized by NICE applications. This requires validation on all operating systems supported by NICE applications.

Microsoft SQL Server

The System QA team validates NICE products for compatibility with a new *major version* of Microsoft SQL Server within 60 business days following the Microsoft official release. This refers to SQL Server editions planned to be used by NICE products under Product Management direction.

Microsoft SQL Server Service Packs

The System QA team validates NICE products for compatibility with Microsoft SQL Server service packs within 30 business days following the Microsoft official release. This includes service packs for all supported SQL Server editions used by NICE products.

Microsoft Internet Explorer

The System QA team validates NICE products for compatibility with Microsoft Internet Explorer web browsers. Other Internet browsers are currently not supported.

Compatibility validation of Internet Explorer service packs follows the same validation guidelines for Windows service packs (see [Microsoft Service Packs](#) on the previous page).

The System QA team validates NICE products with a new *major version* of Internet Explorer within 30 business days following the Microsoft official release.

Compatibility validation of a new version of Windows Operating System (OS) includes validation of the most recent available version of Internet Explorer.

Microsoft Security Patches

Microsoft classifies its security patches as follows:

1. Critical
2. Important
3. Moderate
4. Low

NICE considers Critical and Important security patches as High Risk patches, and Moderate and Low security patches as Low Risk patches.

According to NICE policy, High Risk patches are validated by the System QA team in an expedited manner within 5 business days.

Low Risk patches are validated together with high risk patches. For example, if at a given time, moderate and/or low patches are released with at least one critical or important patch, all patches will be validated. Otherwise, the low risk patch validation is postponed until the next release of high risk patches.

The System QA team is registered on the Microsoft site for alerts of security patches releases. Upon a Microsoft patch release, the System QA team notifies Product Management, Customer Services and the Technical Writing group, listing patches that are relevant to NICE, and their expected validation date.

No later than 72 hours after a high risk patch release the [Documentation Hub](#) portal is updated to inform NICE customers and partners of the expected patch compatibility (content is published in the Security Bulletins directory).

Information about validated bulletins is published using Excel format. The Excel file will be updated periodically with new security bulletins. The new bulletins are added to the same aggregated Excel file.

The Excel file includes bulletins in 3 categories:

1. Bulletins which are certified by NICE: Bulletins that were tested by NICE and approved for installation.
2. Bulletins which are not relevant for NICE: Bulletins. Bulletins that appear under this section affect Microsoft components that should not be installed on NICE servers, and as a result, should NOT be installed. Sample Microsoft components: Domain Controller, DNS server, Microsoft Office.
3. Bulletins which are not certified by NICE: Bulletins that were tested by NICE and were not approved for installation.

Microsoft Security Advisory Patches

Microsoft Security Advisory Patches are a supplement to Microsoft Security bulletins, and address security changes that may not require a security patch, but that may still affect overall security.

NICE considers the Microsoft Security Advisory Patches as Low Risk patches.

According to NICE policy, Low Risk patches are validated by the System QA team , together with the next High Risk patch release (see [Microsoft Security Patches](#) on the previous page).

Microsoft Daylight Saving (DST) Updates

Daylight Saving Time (DST) updates move local time forward one hour ahead of standard time in the spring and set it back one hour in the fall. Microsoft has established an annual update schedule for DST updates, with provisions for semi-annual cumulative updates if necessary.

According to NICE policy, DST updates are validated by the System QA team within 45 business days following the Microsoft official release.

Patch Management Tools

Many NICE customers use patch management tools. Patch management tools allow automatic deployment of Microsoft patches to enterprise servers, including NICE servers, and to client desktops.

In many cases, the deployment of a security patch or service pack requires restarting the machine. The System QA team will test and validate that such reboots forced by the patch management agents can be properly handled by NICE servers and agents. In particular, NICE servers and agents must recommence their normal work immediately following a machine restart after a forced reboot.

Most of the patch management tools allow the setting of rules, as to what is to be installed, when and where. It is imperative that these settings do not contradict the NICE policy for Microsoft security patches and service packs, as stated in MN1145. The System QA team will test and publish recommendations regarding the proper configuration of the patch management tool in order to conform with the NICE policy.

Given the variety of tools available and lack of consistent requirements by the market, and since the NICE solution is based on Microsoft Windows technology, the System QA team will validate, by default, the following Microsoft patch management tool(s):

- Microsoft Systems Management Server (latest version).
- System Center Configuration Manager (latest version).

Other tools might be added to the list of compatible patch management tools upon demand, based on commitment or Product Management request.

Validation of a new patch management software *major version* takes place no later than 45 business days after its general availability.

Remote Support Tools

NICE is required to support remote support tools, in addition to Symantec pcAnywhere (PCA).

Remote support tools validated by NICE must be able to provide remote support for all NICE products over VPN, with full screen view, using encrypted session and strong authentication.

By default, the System QA team validates the following remote support tool(s), in addition to pcAnywhere:

- Microsoft Remote Desktop

Other tools might be added to the list of compatible remote support tools upon demand, based on commitment or Product Management request.

Validation of a new remote support software *major version* takes place no later than 45 business days after its general availability.

Server Hardening

The System QA team publishes an updated Hardening Guide for Windows 2016 and Windows 2019, for every new release of NICE Engage Platform.

The hardening process is based on the [Center for Internet Security \(CIS\) Standard](#).

The NICE Hardening Guide accurately describes the minimal set of services, protocols, user rights assignments, permissions to system resources, and communication ports required to allow normal functioning of the NICE system.

In certain scenarios, if a customer cannot make the necessary analysis based on the information provided by NICE, the customer might ask NICE to validate their hardening procedures based on the customers' IT department security policies. Such a validation could require special staging of a testing environment. This validation could be performed by the System QA team and/or NICE Professional Services in the local region, based on commitment and Product Management approval.

Compatibility Matrix

The following table summarizes the response times required for different types of compatibility validation.

Validation Type	Maximum Validation Response Time	Comment
Antivirus	45 business days	Major versions of leading vendors only (see list on page 133)
Internet Explorer	30 business days	Major versions only
Internet Explorer Service Pack	30 business days	
.NET Framework	30 business days	New versions and service packs
Patch Management	45 business days	Major versions of Microsoft tools only (see page 133)
Remote Support	45 business days	Major versions of selected tools only (see page 133)
Security patch – High-risk	5 business days	Preliminary notification on Documentation Hub within 72 hours of patch release
Security patch – Low-risk	With (next) high risk security patch	

Validation Type	Maximum Validation Response Time	Comment
Security Advisory patch	With (next) high risk security patch	
Daylight Savings Time update	45 business days	
SQL Server	60 business days	Major versions – under Product Management direction
SQL Server Service Pack	30 business days	
Windows Operating System	60 business days	Major versions – under Product Management direction
Windows Service Pack	30 business days	

[This page intentionally left blank]

Vulnerability Scanner Guidelines

This section provides guidelines for configuring vulnerability scanner software running on NICE applications.

Nessus Vulnerability Scanner

Tenable Network Security Nessus is a security software application that allows you to perform vulnerability scanning of infrastructure with automatic scan analysis for remediation prioritization, configuration auditing and compliance checks.

Follow the below guidelines to improve your system performance and prevent recording loss, when running Nessus scans.

Advanced Interaction Recorder

A full Nessus scan with a full-range port scan interrupts recording. To prevent recording loss, use these options:

- Instead of a full-range port scan, run a filtered-range port scan with the Service Discovery function.
A filtered-range port scan excludes ports used by NICE components on each server type. See the *Ports List* document for ports to be excluded.
- Run full Nessus scans only when the system is idle, and no recordings are made.

Interactions Center

A full Nessus scan with a full-range port scan and the Service Discovery function interrupts recording. To prevent recording loss, use these options:

- Run a full-range port scan without Service Discovery.
- Run full Nessus scans only when the system is idle, and no recordings are made.

SQL Backup

This section provides guidelines for backing up NICE Engage Platform SQL databases.

SQL Backup Guidelines

Overview

Customers can implement their own database backup policies for NICE Engage Platform database.

NOTE:

- Each backup schedule provides a different level of recovery. Customers should match recovery levels according to their needs.
- The customer is responsible for database backup operations. They should ensure that there is enough free space for the database and backups.
- Customers **MUST NOT** restore the SQL database from the backup to production system without first consulting with NICE Customer Services.
- Backup software should be used when the size of any of the NICE server databases are approximately 1TB and larger. SQL Backup jobs should not be used in such a scenario.

Schedule

The backup schedule should include full backup, differential backup, and log backup. The backup plan must include all NICE databases and system databases.

Below is a sample backup schedule:

- **Full Backup:** once a week during off/low peak hours.
- **Differential Backup:** daily backup during off/low peak hours.
- **Log Backup:** for sites that include the Media Encryption solution, the nice_crypto database is set to Full Recovery Model. Hourly backup is recommended.

Important! The Full Recovery Model is approved only for DR3.X environments with SQL Server database mirroring.

Backup Files Location

Database backup files should be stored for long term storage at a remote location, and not on the server's hard drive.

Implementation Guidelines

If the customer's backup policy *does not* include the regular NICE Engage Platform backup jobs, they should be disabled. In this situation, the relevant NICE Sentinel alarms should also be disabled.

Disable the following SQL Jobs on the Database server:

- Nice Differential Backup
- Nice Full Backup
- Nice Log Backup

Disable the following SQL Jobs on the Data Mart server:

- Nice Differential Backup
- Nice Full Backup
- Nice Log Backup

If the environment consist of multi Data Hub deployment, SQL backup jobs on all Data Hubs must be disabled.

Backup Tools

Customers can use any off-the-shelf Microsoft SQL Server Backup tools that suits their backup and restore needs while taking into consideration that the NICE Engage Platform database backup must be performed during off peak or low peak hours.

Database Configuration Guidelines

NICE Engage Platform databases can be configured for the Full Recovery Model taking into consideration the following:

- SQL Server log backups are essential.
- In the Full Recovery Model, all transactions are logged in the transactional log until they are backed up. Therefore, log backups must be created on a regular basis. Hourly backup is recommended.

- Transactional log disk space monitoring is essential. If the transactional log is not purged due to backup failure, new transactions and/or calls will not be added to the database.
